

## **Save Time & Maintenance Budget with the Clyde Bergemann RKS & RS Gearbox Exchange Program**

In our continuing effort to provide superior product and service support, Clyde Bergemann is proud to offer a new gearbox exchange program for the model RKS and RS long retractable sootblowers. This program is designed to address the changing maintenance environment needs found in today's Utility Plants, Pulp & Paper Mills and Industrial Plants. It is becoming increasingly difficult for sootblower users to dedicate the time and resources required to properly maintain and service their boiler cleaning equipment. The increasing competitiveness in these customer's respective markets is a major contributing factor to this dilemma and relief from this tight market does not appear to be anywhere on the horizon. Clyde Bergemann has witnessed this trend and has set about to develop products and services to help our customers cope with their changing markets. The **Gearbox Exchange Program** is one of our first efforts to address this trend.

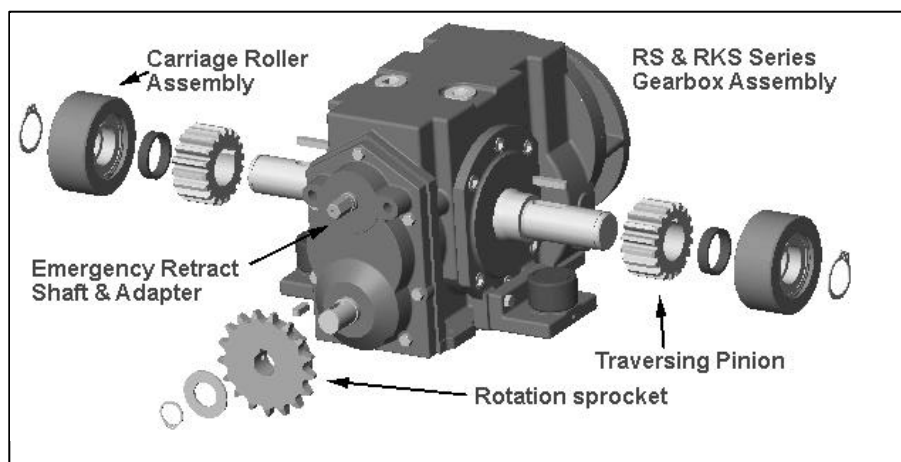

### **The Concept**

Clyde Bergemann has set up an assembly and support program to provide new gearboxes, gearbox support and gearbox remanufacturing services for our customers. Using various production and support channels, we have positioned ourselves to provide to best and highest quality products with a minimum of overall maintenance budget cost to our clients. These high quality gearbox assemblies are inventoried along with associated kit hardware for immediate delivery. When a sootblower gearbox needs attention (for whatever reason) the customer should simply remove the gearbox assembly including all carriage rollers, roller brackets, pinions and sprockets attached to the gearbox and put aside in a core area to be returned to Clyde Bergemann in economical shipping lots. A remanufactured gearbox can be ordered from Clyde Bergemann for immediately shipment (within 48 hours) from our stock. The exchange gearboxes could also be inventoried at your plant or mill site for an even faster turn-around time. If you elect to keep a local inventory of gearboxes using this program, Clyde Bergemann would be happy to discuss creative ways to accommodate this without causing your total inventory value to increase. The exchange gearbox will be complete, ready to bolt on. It will include pinions, side rollers, traverse rollers, roller bracket (as needed) and sprockets. These gearboxes will also be filled with the special Clyde Bergemann synthetic oil.

## The Product

The gearboxes that Clyde Bergemann has selected for this program are the new DRS and DRKS series boxes. These boxes are direct, bolt in replacement that can fit most gearbox footprint (some older version spindle housings may need to be modified to adapt this gearbox).

As part of this program there have been many upgrades incorporated in this new series gearbox to improve maintainability and durability. These improvements are illustrated here.

## The Benefit

The benefits to our customers that participate in this program are extensive. These benefits address cost, time, serviceability, maintainability and operational function. There is no down side to this offer. The benefits include:

1. A cost-effective way to make gearbox repairs with limited resources.
2. A mechanism whereby inventory line item levels and overall cost can be reduced.
3. A way to save time for the maintenance staff, increasing their effectiveness in other areas of the mill or plant.
4. A way to upgrade your equipment without having to make major capital expenditures.
5. A way to insure complete sootblower functionality leading to increased boiler effectiveness and operational process.
6. A way to save maintenance budget.

The exchange gearbox comes with all rollers & associated roller brackets (brackets as needed). All required material for the gearbox exchange will be included in the kit. Call Clyde Bergemann today to initiate this cost-effective program and gain that most precious of all commodities, **TIME!**

The DRKS Gearbox (P/N BE-DRKS/146/44/NEMA) will replace:  
(IEC and all speed variations also included in offer)

1. BE-GRKS/146/44
2. BE-631SP3-3

The DRS Gearbox (P/N BE-DRS/146/44/NEMA) will replace:  
(IEC and all speed variations also included in offer)

1. BE-SP123A-FE145TC
2. BE-631SP2-3
3. BE-GRS/146/44
