## Grundfos sanitary pumps

Grundfos stainless steel sanitary pumps are designed for a wide range of hygienic and sanitary fields of application such as:

- food and beverage industry
- life science/pharmaceutical industry
- personal care
- water treatment.

The Grundfos range of sanitary pumps comprises the below pump types, each state-of-the-art within their specific field of application.

The pumps can be fitted with a variety of features to adapt to specific pumping tasks. In addition, it is possible to customise the pumps for optimum function or performance in relation to the job at hand.

### Euro-HYGIA®

Euro-HYGIA® single-stage, end-suction centrifugal pumps come in a variety of flexible versions. The pumps offer heads up to 70 metres, flow rates up to 250 m<sup>3</sup>/h and operating pressures up to 16 bar. Pipe connections range from DN 25 to DN 125 and motor sizes from 0.55 to 22 kW. See page 6.

### F&B-HYGIA®

F&B-HYGIA® single-stage, end-suction centrifugal pumps offer heads up to 70 metres, flow rates up to 105 m<sup>3</sup>/h and operating pressures up to 16 bar. Pipe connections range from DN 40 to DN 100 and motor sizes from 1.1 to 18.5 kW. See page 8.

### Contra

Contra single-stage or multi-stage, end-suction centrifugal pumps come in a variety of flexible versions. The pumps offer heads up to 160 metres, flow rates up to 55 m<sup>3</sup>/h and operating pressures up to 25 bar. Pipe connections range from DN 25 to DN 80 and motor sizes from 0.55 to 18.5 kW. See page 10.

### durietta 0

durietta 0 single-stage or multi-stage centrifugal pumps offer low flow and high head. The pumps are available in a vertical and a horizontal version. The pumps offer heads up to 70 metres, flow rates up to 6 m<sup>3</sup>/h and operating pressures up to 8 bar. Pipe connections range from DN 25 to DN 40 and motor sizes from 0.25 to 2.2 kW. See page 12.

### SIPLA

SIPLA single-stage, self-priming, side-channel pumps offer heads up to 56 metres, flow rates up to 80 m<sup>3</sup>/h and operating pressures up to 10 bar. Pipe connections range from DN 32 to DN 80 and motor sizes from 0.75 to 22 kW. See page 14.

### MAXA and MAXANA

MAXA and MAXANA are single-stage, end-suction centrifugal pumps. The MAXA pumps are designed according to DIN EN 733. The pumps offer heads up to 97 metres, flow rates up to 820 m<sup>3</sup>/h and operating pressures up to 10 bar. Pipe connections range from DN 32 to DN 150 and motor sizes from 0.55 to 90 kW. See page 16.

## Hygienic design

The Grundfos sanitary pumps have been designed in accordance with the strictest hygienic design criteria.

The surface finish of the materials used is of paramount importance to prevent possible breeding grounds for bacteria and germs.

Fully drainable models are available, and the use of AISI 316L (DIN EN 1.4404/1.4435) cold-rolled and/or forged stainless steel ensures a homogeneous, pore-free surface in contrast to cast materials.

The design, materials and material surface finish are subject to a variety of national and international rules and regulations, guidelines and laws. Among these are the EU Machinery Directive, the GMP (Good Manufacturing Practices) rules and regulations, the FDA (Food and Drug Administration) regulations, the EU foodstuff hygienic guidelines, the DIN EN 12462 Biotechnology Standard as well as the EHEDG (European Hygienic Engineering & Design Group) and the QHD (Qualified Hygienic Design) criteria.

### Shaft seals

Single, flushed or double mechanical shaft seal arrangements are available, depending on the application and the pumped liquid. The seals offer trouble-free operation.

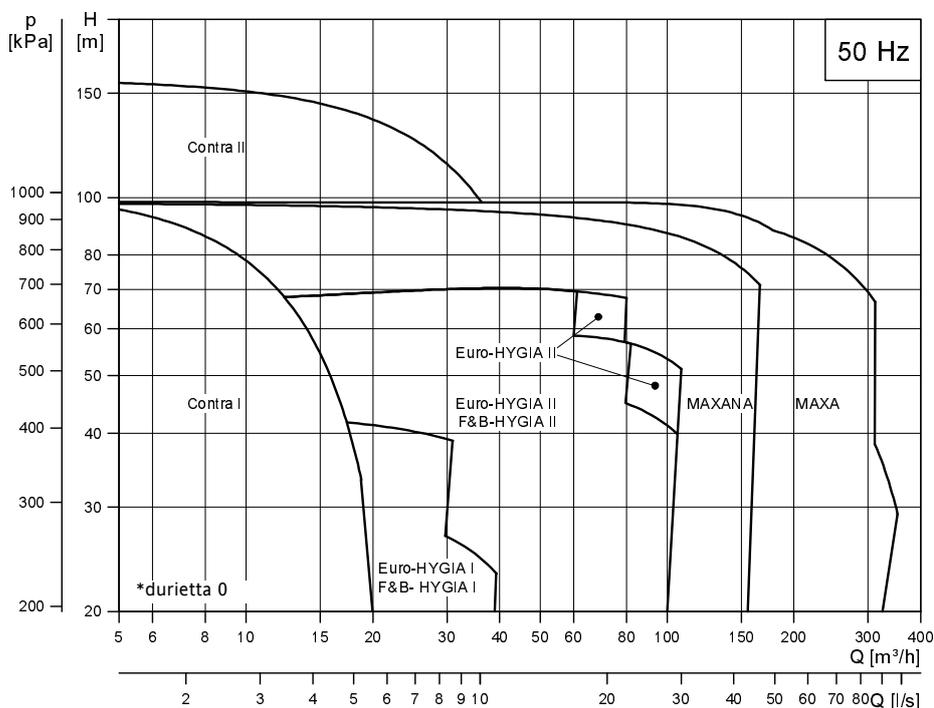

The single shaft seals are inboard mechanical seals with the optimum position in the pumped liquid in order to ensure lubrication, cooling as well as CIP (Cleaning-In-Place) and SIP (Sterilisation-In-Place).

Double seals are available as a tandem arrangement or mounted back-to-back.

### Connections

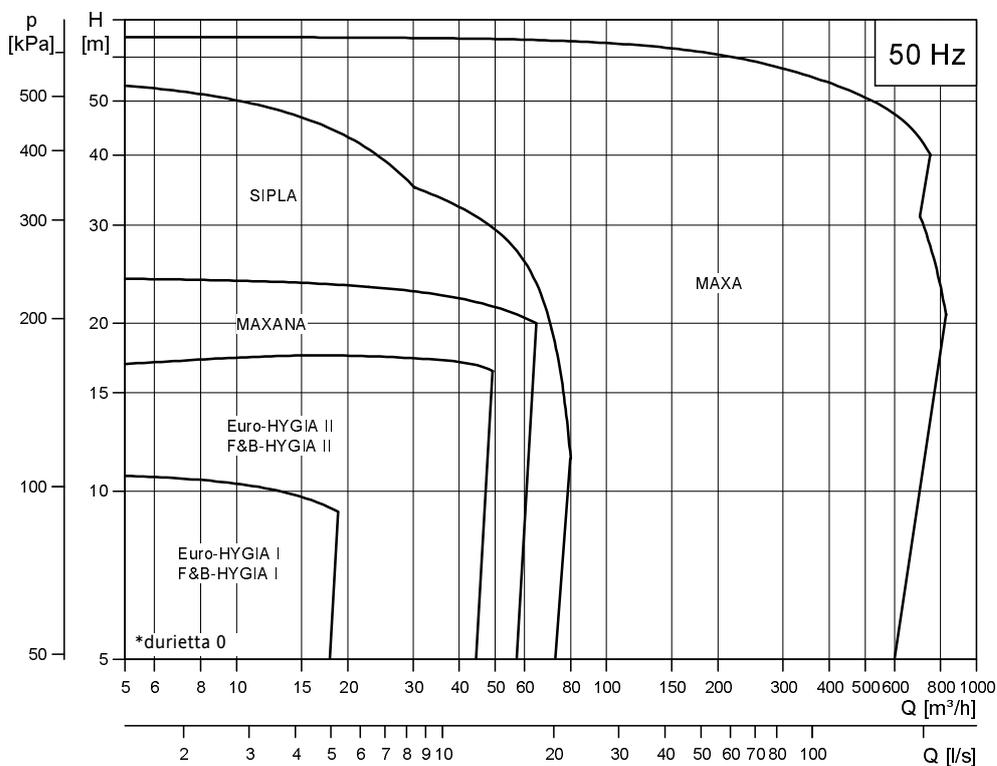

A variety of connections are available, such as sterile threads to DIN 11864-1 PN 16 and sterile flanges to DIN 11864-2 PN 16. See page 34.

## Euro-HYGIA®

GR8963

Fig. 1 Euro-HYGIA®

### Euro-HYGIA® I and II

#### Technical data

Head:	up to 70 m
Flow rate:	up to 108 m <sup>3</sup> /h
Euro-HYGIA® III (on request):	up to 250 m <sup>3</sup> /h
Operating pressure:	up to 16 bar
Operating temperature:	95 °C (up to 150 °C on request)
Sterilisation temperature:	140 °C (SIP)

#### Applications

The unique hygienic design and the materials used make the Euro-HYGIA® pumps suitable for these applications and products:

#### Life science/pharmaceutical industries

- pure water systems (WFI)
- biotechnology
- infusion
- nutrient and alcohol infusions
- filling/bottling systems.

#### Personal care

- pure water
- lotions
- perfumes.

#### Food and beverage industries

- breweries
- dairies
- soft drink mixing
- yeast processes.

#### Other industries

- cleaning solutions (CIP systems)
- water treatment
- semi-conductor manufacturing
- metal surface treatment.

#### Construction

Euro-HYGIA® pumps are single-stage, end-suction centrifugal pumps, designed to meet the hygienic requirements of sterile process technology.

The pumps are available in a variety of flexible versions. The pumps are CIP and SIP capable in compliance with the DIN EN 12462 performance criteria.

The design fulfils the following requirements:

- QHD criteria
- EHEDG recommendations for CIP cleanability
- GOST sanitary standard (Russia).

Fig. 2 Certification

The pumps comply with these surface finish requirements:

Standard pump version: 3A1  
Optional: 3A2, 3A3.

For explanation, see [Certification](#), page 55.

The pump housing is made of heavy-duty, rolled and deep-drawn CrNiMo steel to DIN EN 1.4404/1.4435, the equivalent of AISI 316L.

Three impeller types are available, depending on the applications: Semi-open, closed and free-flow impeller. See page 51.

The pumps have a mechanical shaft seal and a fan-cooled asynchronous motor to enclosure class IP55.

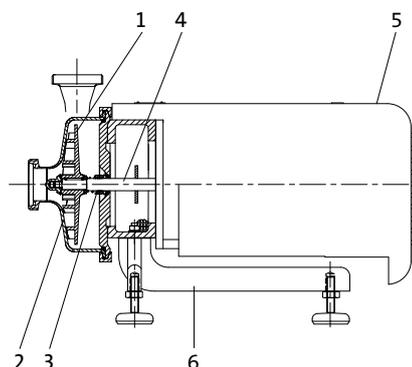

Fig. 3 Sectional drawing of Euro-HYGIA® I Bloc-SUPER on combi foot

TM02 9607 3504

**Materials**

Pos.	Component	Material	DIN/EN
1	Impeller	CrNiMo steel	1.4404/ 1.4435
2	Pump housing	CrNiMo steel	1.4404/ 1.4435
3	Shaft seal	Sterile applications: SiC/SiC/EPDM Hygienic applications: Carbon/stainless steel/EPDM or FKM	
4	Pump shaft	CrNiMo steel	1.4571
5	Shroud	Stainless steel	
6	Foot	Stainless steel/cast iron	

**Design variations**

Standard variation	Description
Euro-HYGIA® Adapta®	Horizontal installation, Adapta® motor stool
Euro-HYGIA® Adapta® SUPER	Horizontal installation, Adapta® motor stool, motor with stainless steel shroud
Euro-HYGIA® Bloc	Horizontal installation
Euro-HYGIA® Bloc-SUPER	Horizontal installation, motor with stainless steel shroud
Variation on request	Description
Euro-HYGIA® Adapta®-V	Vertical installation, Adapta® motor stool
Euro-HYGIA® Bloc-V	Vertical installation
Euro-HYGIA® VE	Vertical tank installation
Euro-HYGIA® CN	Horizontal installation, long-coupled version mounted on base plate
Euro-HYGIA® tronic	Horizontal/vertical installation, motor with built-in frequency converter (up to 22 kW)

See page 20.

**Mechanical shaft seal**

Grundfos offers these shaft seal arrangements:

- single seal
- double seal, tandem
- double seal, back-to-back.

As standard, the Euro-HYGIA® is fitted with a single, inboard, mechanical shaft seal with an optimum position in the pumped liquid. This ensures lubrication, cooling as well as CIP and SIP, according to the criteria of hygienic design.

Standard seals have carbon/stainless steel seal faces and EPDM O-rings. Other seal face material combinations are available on request.

See page 53.

**Surface treatment**

As standard, all wetted parts are electro-polished to improve corrosion-resistance and surface finish.

**Standard connection**

Grundfos offers threads to DIN 11851 as standard for Euro-HYGIA® pumps.

**Connections on request**

Threads:

- Aseptic threads to DIN 11864-1.

Flanges:

- Aseptic flanges to DIN 11864-2
- APV flanges
- Flanges to DIN EN 1092-1 (DIN 2633)
- Kremo flanges to DIN EN 1092-1 (DIN 2633/42).

Clamps:

- Clamps to DIN 32676
- Clamps for Tri-Clamp®/Tri-Clover®.

**Note:** Not all pump sizes are available with all connection types. See pages 34 to 35.

For other connection types as well as applications and design of connections, see pages 28 to 33.

**Features and benefits**

- A wide range of foot options for motor and pump.
- Extremely reliable operation under most working conditions.
- Optimised hydraulics for high efficiency - reduced power consumption.
- Multi-function inducer for NPSH reduction or pumping of liquids containing gas (Euro-HYGIA® II).
- Motors for special voltages and frequencies.
- Euro-HYGIA®, Adapta® and Euro-HYGIA® CN with explosion-proof or flameproof three-phase motors available for ATEX applications.
- Motors for variable-speed drive with built-in frequency converter, available for motor sizes up to 22 kW.
- Mobile pumps mounted on two-wheel stainless steel trolley with on/off switch and electric cable.
- DN 15 diaphragm valve drain for sterile processes.
- DN 15 drain connection.
- Heating/cooling jacket for pump housing.
- Integral flange ring for bolted housing closure (HPM).
- Special paint finish for the motor and the cast iron/ steel parts.

## F&B-HYGIA®

GrA2396

Fig. 4 F&B-HYGIA®

### F&B-HYGIA® I and II

#### Technical data

Head:	up to 70 m
Flow rate:	up to 105 m <sup>3</sup> /h
Operating pressure:	up to 16 bar
Operating temperature:	95 °C
Sterilisation temperature:	140 °C (Sterilisation-In-Place, SIP)

#### Applications

The unique hygienic design and the materials used make the F&B-HYGIA® pumps suitable for these products:

#### Beverages

Beer, soft drinks, alcohol, wine, fruit drinks, yeast, etc.

#### Dairy products

Milk, whey, cream, condensed milk, etc.

#### Confectionery

Syrup, sugar solutions, etc.

#### Meat

Liquid fat, frying oil, smokehouse spray, blood, etc.

#### Construction

F&B-HYGIA® single-stage, end-suction centrifugal pumps are designed to meet the hygienic requirements of sterile process technology.

The pumps are CIP and SIP capable in compliance with the DIN EN 12462 performance criteria.

The design fulfils the following requirements:

- QHD criteria
- EHEDG recommendations for CIP cleanability.

For explanation, see [Certification](#), page 55.

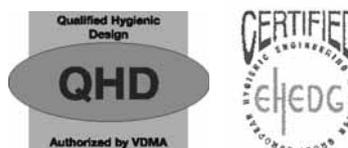

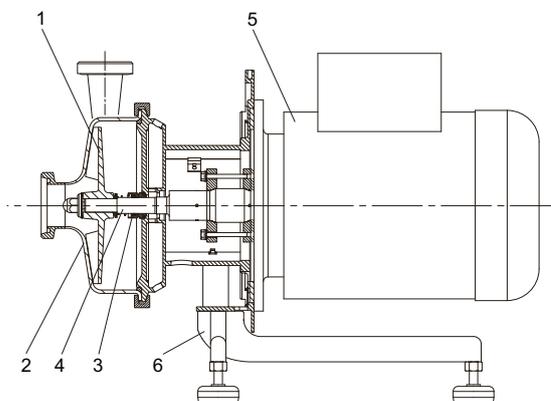

Fig. 5 Certification

The pump housing is made of heavy-duty, rolled and deep-drawn CrNiMo steel to DIN EN 1.4404, the equivalent of AISI 316L.

F&B-HYGIA® pumps are fitted with a semi-open impeller. See page 51.

The pumps have a mechanical shaft seal (optionally flushed) and a fan-cooled, asynchronous motor to enclosure class IP55.

TM03 3898 1106

Fig. 6 Sectional drawing of F&B-HYGIA® K on combi foot

### Materials

Pos.	Component	Material	DIN EN
1	Impeller	CrNiMo steel	1.4404
2	Pump housing	CrNiMo steel	1.4404
3	Shaft seal	Hygienic applications: Carbon/stainless steel/EPDM or FKM	
4	Pump shaft	CrNiMo steel	1.4571
5	Motor		
6	Foot	Stainless steel/cast iron	

### Design variations

Standard variation	Description
F&B-HYGIA® K	Horizontal installation with plug-in shaft and multi-functional motor stool.
F&B-HYGIA® K-SUPER	Horizontal installation with plug-in shaft and multi-functional motor stool and motor with stainless steel shroud.

See page [20](#).

### Mechanical shaft seal

Grundfos offers these shaft seal arrangements:

- single seal
- single seal, flushed.

As standard, the F&B-HYGIA® is fitted with a single, inboard, mechanical shaft seal with an optimum position in the pumped liquid. This ensures lubrication, cooling as well as CIP and SIP, according to the criteria of hygienic design.

Standard seals have carbon/stainless steel seal faces and EPDM O-rings. Other seal face material combinations are available on request.

See page [53](#).

### Surface treatment

As standard, all chrome-steel parts are electro-polished to improve corrosion-resistance and surface finish.

### Standard connections

Grundfos offers threads to DIN 11851 as standard for F&B-HYGIA® pumps.

### Connections on request

Flanges:

- Kremo flanges to DIN EN 1092-1 (DIN 2633/42).

Clamps:

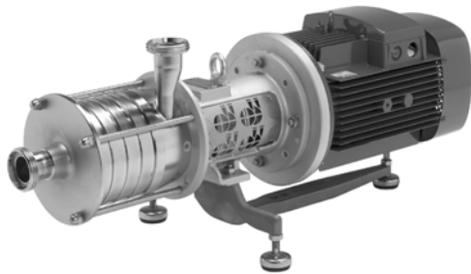

- Clamps for Tri-Clamp®/Tri-Clover®.

For other connection types as well as applications and design of connections, see pages [28](#) to [33](#).

### Features and benefits

- A wide range of foot options for motor and pump.
- Extremely reliable operation under most working conditions.
- Optimised hydraulics for high efficiency - reduced power consumption.
- Motors for special voltages and frequencies on request.
- Mobile pumps mounted on two-wheel stainless steel trolley with on/off switch and electric cable.

## Contra

GR8961

Fig. 7 Contra

### Contra I and II

#### Technical data

Head:	up to 160 m
Flow rate:	up to 55 m <sup>3</sup> /h
Operating pressure:	up to 25 bar
Operating temperature:	95 °C (up to 150 °C on request)
Sterilisation temperature:	140 °C (SIP)

#### Applications

The unique hygienic design and the materials used make the Contra pumps suitable for these applications:

#### Food and beverage industry

- breweries and dairies
- carbonising systems
- food processing plants.

#### Pharmaceutical and related industries

- purification systems
- pure-water systems (WFI)
- personal care.

#### Other industrial applications

- surface treatment systems
- water processing systems
- CIP feeding systems.

#### Construction

Contra single-stage or multi-stage, end-suction centrifugal pumps are designed to meet the hygienic requirements of sterile process technology.

The pumps are available in a variety of flexible versions. The pumps are CIP and SIP capable in compliance with the DIN EN 12462 performance criteria. They also meet the GMP requirements regarding FDA-approved materials.

The design fulfils the following requirements:

- QHD criteria
- EHEDG recommendations.
- GOST sanitary standard (Russia).

Fig. 8 Certification

The pumps comply with these surface finish requirements:

Standard pump version: 3A1  
Optional: 3A2, 3A3.

For explanation, see section [Certification](#), page 55.

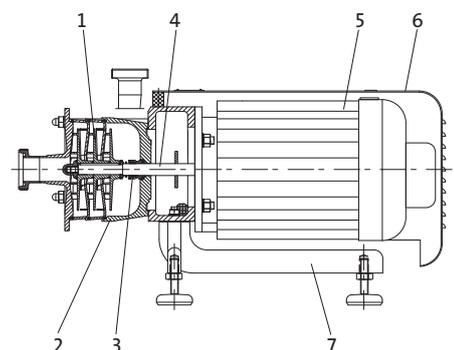

The pump housing is made of rolled and forged stainless steel to DIN EN 1.4404/1.4435, the equivalent of AISI 316L. This guarantees a homogeneous, pore-free surface, in contrast to cast materials.

The Contra pumps have open diffusers. The design ensures that O-ring seals for pump housing and impeller are located to meet the criteria of hygienic design with metal-to-metal contact and that there are no dead ends in the pump housing.

Contra pumps are fitted with a semi-open impeller as standard. See page 51.

The vertical versions are fully self-draining through the suction port of the pumps.

The pumps have a mechanical shaft seal and a fan-cooled asynchronous motor to enclosure class IP55.

TM02 9610 3504

6	Shroud	Stainless steel	
7	Foot	Stainless steel/cast iron	

## Design variations

Standard variation	Description
Contra Adapta®	Horizontal installation, Adapta® motor stool
Contra Adapta® SUPER	Horizontal installation, Adapta® motor stool, motor with stainless steel shroud
Contra Adapta®-V	Vertical installation, Adapta® motor stool
Contra Bloc	Horizontal installation
Contra Bloc-SUPER	Horizontal installation, motor with stainless steel shroud

Variation on request	Description
Contra Bloc-V	Vertical installation
Contra CN	Horizontal installation, long-coupled version mounted on base plate
Contra tronic	Horizontal/vertical installation, motor with built-in frequency converter (up to 18.5 kW)

See page 20.

## Mechanical shaft seal

Grundfos offers these shaft seal arrangements:

- single seal
- double seal, tandem
- double seal, back-to-back.

As standard, the Contra is fitted with a single, inboard, mechanical shaft seal with an optimum position in the pumped liquid. This ensures lubrication, cooling as well as CIP and SIP according to the criteria of hygienic design.

Standard seals have carbon/stainless steel seal faces and EPDM O-rings. Other seal face material combinations are available on request.

See page 53.

## Surface treatment

As standard, all wetted parts are electro-polished to improve corrosion-resistance and surface finish.

## Standard connection

Grundfos offers threads to DIN 11851 as standard for Contra pumps.

## Connections on request

Threads:

- Aseptic threads to DIN 11864-1.

Flanges:

- Aseptic flanges to DIN 11864-2
- APV flanges
- Flanges to DIN EN 1092-1 (DIN 2633)
- Kremo flanges to DIN EN 1092-1 (DIN 2633/42).

Clamps:

- Clamps to DIN 32676
- Clamps for Tri-Clamp®/Tri-Clover®.

**Note:** Not all pump sizes are available with all connection types. See page 37 ff.

For other connection types as well as applications and design of connections, see pages 28 to 33.

## Features and benefits

- A wide range of foot options for motor and pump.
- Extremely reliable operation under most working conditions.
- Optimised hydraulics for high efficiency - reduced power consumption.
- Contra Adapta® and CN with explosion-proof or flameproof motors available for ATEX applications.
- Motors with special voltages and frequencies.
- Pump with water-cooled motor for clean-room applications.
- Adapta® tronic versions fitted with motors for variable speed drive with built-in frequency converter, available for motor sizes up to 18.5 kW.
- Flush or barrier fluid systems for tandem or back-to-back double mechanical seals.
- Mobile pumps mounted on two-wheel trolley with on/off switch.
- Special paint for motor, cast iron and carbon steel parts (except for Adapta® Bloc).

## durietta 0

GRA2397

Fig. 10 durietta 0

### durietta 0 pumps

#### Technical data

Head:	up to 70 m
Flow rate:	up to 6 m <sup>3</sup> /h
Operating pressure:	up to 8 bar
Temperature range:	0 °C to 90 °C.

#### Applications

durietta 0 pumps are suitable for these applications:

#### Food and beverage industry

- pumping in micro-breweries and dairies
- bottling systems for liquids
- food processing plants
- drinking water systems.

#### Pharmaceutical and related industries

- purification systems
- personal care.

#### Other industrial applications

- semi-conductor manufacturing
- plate heat exchangers.

### Construction

durietta 0 are compact, end-suction, single-stage or multi-stage centrifugal pumps.

The design fulfils the following requirement:

- GOST sanitary standard (Russia).

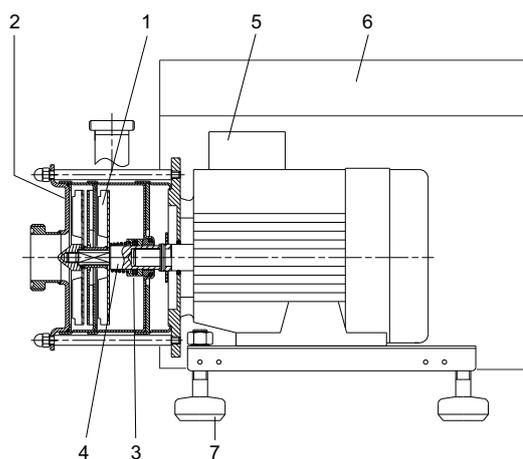

Fig. 11 Certification

The laminated, stainless steel pump components are manufactured to DIN EN 1.4571 and DIN EN 1.4404.

The impeller types available are semi-open or closed, depending on the applications. See page 51.

The pumps have a mechanical shaft seal and an asynchronous motor to enclosure class IP55.

TM03 3782 1006

Fig. 12 Sectional drawing of durietta 0/2 K SUPER on combi foot

### Materials

Pos.	Component	Material	EN/DIN
1	Impeller	CrNiMo steel	1.4404
2	Pump housing	CrNiMo steel	1.4404
3	Shaft seal	SiC/SiC or Carbon/stainless steel and EPDM or FKM	
4	Pump shaft	CrNiMo steel	1.4571
5	Motor		
6	Shroud	Stainless steel	1.4307
7	Foot	Stainless steel	1.4307

## Design variations

Standard variation	Description
durietta 0 K	Horizontal installation, monobloc
durietta 0 K SUPER	Horizontal installation, motor with stainless steel shroud on stainless steel foot with elastomer base
Variation on request	Description
durietta 0 tronic	Horizontal installation, motor with built-in unshrouded frequency converter. Only available for 0.75 kW.

See page [20](#).

## Mechanical shaft seal

Grundfos offers these shaft seal arrangements:

- single seal
- double seal, tandem (maximum four stages)

As standard the durietta 0 is fitted with a mechanical shaft seal with an optimum position in the pumped liquid. This ensures lubrication and cooling.

Standard seals have carbon/stainless steel seal faces and EPDM O-rings. Other seal face material combinations are available on request.

See page [53](#).

## Surface treatment

As standard, wetted parts are blasted. Electro-polished wetted parts are also available on request.

## Standard connection

Grundfos offers threads to DIN 11851 as standard for durietta 0 pumps.

## Connections on request

Threads:

- Threads, SMS.

Flanges:

- Flanges to DIN EN 1092-1 (DIN 2642).

Clamps:

- Tri-Clover / Tri-Clamp

**Note:** Not all pump sizes are available with all connection types. See page [43](#) to [44](#).

For other connection types as well as applications and design of connections, see pages [28](#) to [33](#).

## Features and benefits

- Motor for special voltages on request
- Motor with built-in frequency converter for output regulation (does not apply to the K SUPER version)
- Mobile pumps mounted on stainless steel two-wheel trolley with on/off switch (on request)
- Special paint finish for the motor (on request).

### SIPLA

##### Technical data

Head:	up to 56 m
Flow rate:	up to 80 m <sup>3</sup> /h
(SIPLA 90.1 - on request):	up to 90 m <sup>3</sup> /h
Operating pressure:	up to 10 bar
Operating temperature:	95 °C
Sterilisation temperature:	140 °C (SIP)

##### Applications

The exceptional self-priming capability make the SIPLA pumps suitable for these applications:

##### Food and beverage industry

- transfer of yeast
- transfer of cheese whey.

##### Pharmaceutical industry

- transfer of glycerine.

##### Other industrial applications

- CIP return pumping
- applications involving liquids with a high air content
- filtration systems.

#### Construction

SIPLA are single-stage, self-priming, side-channel pumps.

The design fulfils the following requirement:

- GOST sanitary standard (Russia).

Fig. 14 Certification

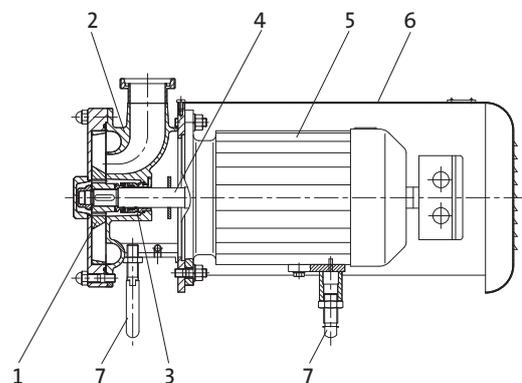

The pump housing and front cover are made of precision-cast stainless steel to DIN EN 1.4404. The impeller nut is made of stainless steel to DIN EN 1.4404, the equivalent of AISI 316L.

SIPLA pumps are fitted with an open star impeller as standard. See page 51.

The pump shaft is made of stainless steel to DIN EN 1.4571, the equivalent of AISI 316Ti.

Thanks to its unique side-channel design, the SIPLA pump is capable of handling liquids with a high air content as in CIP return systems.

The pumps have a mechanical shaft seal and a fan-cooled asynchronous motor to enclosure class IP55.

TM02 9608 3504

Fig. 15 Sectional drawing of SIPLA Bloc-SUPER on stainless steel ball feet

### Materials

Pos.	Component	Material	EN/DIN
1	Impeller	CrNiMo steel	1.4404
2	Pump housing	CrNiMo steel	1.4404
3	Shaft seal	Hygienic applications: Carbon/stainless steel/ EPDM or FKM	
4	Pump shaft	CrNiMo steel	1.4571
5	Motor		
6	Shroud	Stainless steel	
7	Foot	Stainless steel/cast iron	

### Design variations

Standard variation	Description
SIPLA Adapta®	Horizontal installation, Adapta® motor stool
SIPLA Adapta® SUPER	Horizontal installation, Adapta® motor stool, motor with stainless steel shroud
SIPLA Bloc	Horizontal installation
SIPLA Bloc-SUPER	Horizontal installation, motor with stainless steel shroud
Variation on request	Description
SIPLA CN	Horizontal installation, long-coupled version mounted on base plate
SIPLA tronic	Horizontal/vertical installation, motor with built-in frequency converter (up to 7.5 kW for Bloc pumps, and up to 22 kW for Adapta® pumps)

See page [20](#).

### Mechanical shaft seal

Grundfos offers this shaft seal arrangement:

- single seal

SIPLA pumps are fitted with a single, inboard, mechanical shaft seal with an optimum position in the pumped liquid. This ensures lubrication, cooling as well as CIP and SIP.

As standard, the SIPLA pump is fitted with a shaft seal with carbon/stainless steel seal faces and EPDM or FKM O-rings.

Shaft seals with SiC/SiC seal faces and EPDM or FKM O-ring are available on request.

See page [53](#).

### Surface treatment

As standard, all wetted parts are electro-polished to improve corrosion-resistance and surface finish.

### Standard connection

As standard Grundfos offers threads to DIN 11851 for SIPLA pumps.

### Connections on request

Flanges:

- Flanges to DIN EN 1092-1 (DIN 2633/42).

Clamps:

- Clamps to DIN 32676
- Clamps for Tri-Clamp®/Tri-Clover®.

For other connection types as well as applications and design of connections, see pages [28](#) to [33](#).

### Features and benefits

- A wide range of foot options for motor and pump
- Extremely reliable operation under most working conditions
- Optimised hydraulics for high efficiency - reduced power consumption
- Motors for variable speed drive with built-in frequency converter, "tronic", available for motor sizes up to 7.5 kW for Bloc pumps, and up to 22 kW for Adapta® pumps
- ATEX-certified pumps available on request
- Mobile pumps mounted on two-wheel trolley with on/off switch.

## MAXA and MAXANA

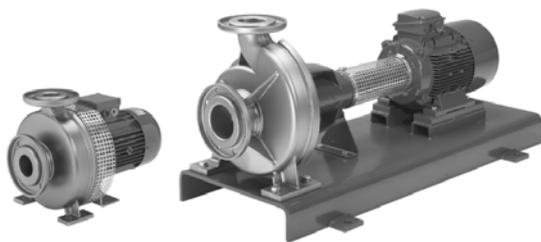

Fig. 16 MAXA and MAXANA

### Technical data

#### MAXA pumps

Head:	97 m
Flow rate:	up to 820 m <sup>3</sup> /h
Operating pressure:	up to 10 bar
Operating temperature:	95 °C (up to 150 °C on request)
Sterilisation temperature:	140 °C (SIP)

#### MAXANA pumps

Head:	up to 97 m
Flow rate:	up to 165 m <sup>3</sup> /h
Operating pressure:	up to 10 bar
Operating temperature:	95 °C (up to 150 °C on request)
Sterilisation temperature:	140 °C (SIP)

### Applications

The MAXA and MAXANA pumps are suitable for these applications:

#### Food and beverage industry

- gentle pumping of mash and wort
- beer filtration (hot side)
- liquid transfer in dairies and food processing plants.

#### Other industrial applications

- water treatment plants
- chemical handling systems
- applications involving liquids with a high content of solid particles
- environmental systems
- bio fuel systems.

### Construction

The MAXA and MAXANA are single-stage, end-suction, centrifugal pumps.

The pumps are available in a variety of flexible versions.

The design fulfils the following requirements:

- EHEDG recommendations for CIP cleanability. Only valid for certain models.
- GOST sanitary standard (Russia).

Fig. 17 Certification

For explanation, see [Certification](#), page 55.

### Requirements complied with:

Pump type	Standard
MAXA	3A0 and 3A2*
MAXANA	3A0

\*Applies to MAXA 100-200, 100-250, 125-250, 150-250, 200-400

The major dimensions and characteristics of the pumps are according to DIN EN 733 and DIN EN 22858.

The pump housing is made of heavy-duty, rolled and deep-drawn stainless steel to DIN EN 1.4404. The back plate is made of rolled stainless steel to DIN EN 1.4571.

The pumps feature closed steel impellers with optimised blade entry angles to DIN EN 1.4571. See page 51.

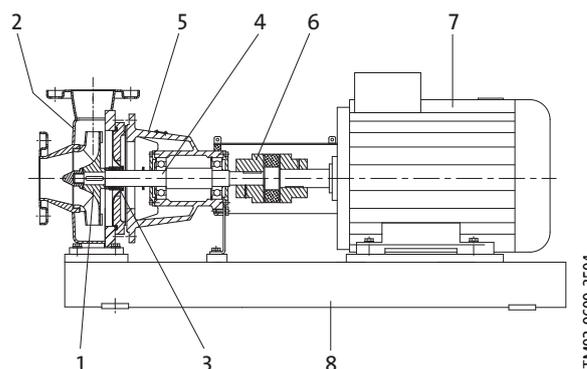

Fig. 18 Sectional drawing of MAXANA-CN on base plate

## Materials

Pos.	Component	Material	EN/DIN
1	Impeller	CrNiMo steel	1.4404/ 1.4462
2	Pump housing	CrNiMo steel	1.4404
3	Shaft seal	Sterile applications: SiC/ SiC/EPDM Hygienic applications: Carbon/stainless steel/ EPDM or FKM	
4	Pump shaft	CrNiMo steel	1.4571/ 1.4462
5	Bearing bracket	Stainless steel	
6	Coupling		
7	Motor		
8	Base plate	Steel Chrome steel	

## Design variations

Standard variation	Description
MAXA L	Horizontal installation
MAXA CN	Horizontal installation, mounted on base plate
MAXANA Adapta®	Horizontal installation, Adapta® motor stool
MAXANA Bloc	Horizontal installation

Variation on request	Description
MAXA CN	Horizontal installation, mounted on base plate
Maxa VE	Vertical tank installation
MAXA tronic	Horizontal installation, motor with built-in frequency converter (up to 22 kW)
MAXANA CN	Horizontal installation, mounted on base plate
MAXANA L	Horizontal installation, mounted on pump foot or motor foot
MAXANA tronic	Horizontal installation, motor with built-in frequency converter (up to 22 kW)

See page 20.

## Mechanical shaft seal

Grundfos offers these shaft seal arrangements:

- single seal
- double seal, tandem
- double seal, back-to-back.

As standard, MAXA and MAXANA pumps are fitted with a single, inboard, mechanical shaft seal with an optimum position in the pumped liquid. This ensures efficient cleaning, cooling and lubrication.

The mechanical shaft seal is designed to DIN EN 12756.

Standard single seals have carbon/stainless steel seal faces and EPDM O-rings. Other seal face material combinations are available on request.

See page 53.

## Surface treatment

As standard, all wetted parts are made of corrosion-resistant chrome-nickel-molybdenum steel.

Grundfos offers industrial, electro-polished variants.

## Standard connection

Grundfos offers Kremo flanges to DIN EN 1092-1 as standard for MAXA and MAXANA pumps.

As standard MAXA pumps also come with flanges to DIN EN 1092-1.

**Note:** Not all MAXA pump sizes are available with all connection types. See page 47.

## Connections on request

For other connection types as well as applications and design of connections, see pages 28 to 33.

## Features and benefits

- A wide range of foot or base plate options for motor and pump.
- Extremely reliable operation under most working conditions.
- Optimised hydraulics for high efficiency - reduced power consumption.
- Optional location of discharge port on top, on right or on left side of pump.
- Double mechanical seals, depending on model, with flushing or barrier fluid.
- Stuffing box in stead of mechanical shaft seal, single or flushed with C-bearing support to DIN EN 22858 and shaft sleeve.
- Motors with special voltages and frequencies.
- Adapta® and CN available with a flameproof three-phase motor for ATEX applications.
- Motors for variable speed drive with built-in frequency converter as "tronic", available for motor sizes up to 22 kW.
- Pump housing drain connection DN 15; other sizes available.
- Housing with heating jacket. Applies only to MAXANA.
- Special paint for motor and steel components.

## Version key

Version number	Description
1	On cast iron foot
2	On stainless steel foot
3	Without foot/stainless steel ball feet
4	On stainless steel ball feet
5	On motor foot
6	On motor foot with carbon steel support
7	On motor foot with stainless steel support
8	On stainless steel pedestal without suction elbow
9	On stainless steel pedestal with suction elbow
10	Without pedestal and suction elbow <sup>1)</sup>
11	Without pedestal but with suction elbow
16	On vertical frame without suction elbow <sup>1)</sup>
18	On stainless steel trolley, normal wheels
19	On stainless steel trolley, anti-static wheels
21	On pump and motor support feet ( ≤ frame size 112)
22	On Adapta <sup>®</sup> foot ( ≤ 45 kW, size III)
23	On stainless steel combi foot
24	Wall-mounting (Euro-HYGIA <sup>®</sup> : Only available as HPM, Contra; 3 stages are standard)
25	Without base plate <sup>2)</sup>
26	With coupling (< 15 kW only with DKM spacer) <sup>2)</sup>
27	With spacer coupling ( ≥ 15 kW only; < 15 kW on request) <sup>2)</sup>
28	Without coupling <sup>2)</sup>
29	Without spacer coupling <sup>2)</sup>
30	With motor <sup>2)</sup>
31	Without motor <sup>2)</sup>
32	On carbon steel base plate <sup>2)</sup>
33	On stainless steel base plate <sup>2)</sup>
34	Stand-proof coupling guard <sup>2)</sup>
35	Chemical standard, base plate with anchor bolt holes <sup>2)</sup>
50	With built-in frequency converter (tronic), from 1.5 to 7.5 kW
51	Motor with increased-safety explosion protection (EEx e II T1-T3) <sup>3)</sup>
52	Motor with flameproof-enclosure explosion protection (EEx de IIC T1-T4) <sup>3)</sup>
53	Hydraulic drive
54	Electric motor and hydraulic drive through second shaft end
57	Tank installation with base plate and discharge pipe
58	Tank installation without base plate and without discharge pipe
59	Tank installation with base plate and without discharge pipe
60	KLM (clamp ring), see fig. 30
61	HPM (flange), see fig. 30
62	Vertical foot with fixed suction elbow

- 1) In connection with Adapta<sup>®</sup> size III.
- 2) Design CN. All combinations are possible with base plate mounted. Motor and coupling size as well as type should be provided to determine base plate size.
- 3) For further information on pumps conforming to the ATEX 94/9/EC Directive, contact Grundfos.

### 4-pole, 3 x 220-240 V Δ/380-415 V Y

P2 [kW]	I <sub>1/1</sub> [A]	cos φ	η [%]	n [min <sup>-1</sup> ]
1.1	4.70/2.70	0.78 - 0.72	83.8	1440-1445
1.5	6.20/3.60	0.77 - 0.72	85.0	1440-1450
2.2	9.25/5.35	0.77 - 0.70	86.4	1440-1450
3.0	12.5/7.20	0.77 - 0.70	87.4	1440-1450
4.0	15.4/8.90	0.81 - 0.75	88.3	1450-1455

### 4-pole, 3 x 380-415 V Δ

P2 [kW]	I <sub>1/1</sub> [A]	cos φ	η [%]	n [min <sup>-1</sup> ]
1.1	2.70	0.78 - 0.72	83.8	1440-1445
1.5	3.60	0.77 - 0.72	85.0	1440-1450
2.2	5.35	0.77 - 0.70	86.4	1440-1450
3.0	7.20	0.77 - 0.70	87.4	1440-1450
4.0	8.90	0.81 - 0.75	88.3	1450-1455

## Electrical data of standard motors with built-in frequency converter

### 2-pole, 3 x 380-415 V

P2 [kW]	I <sub>1/1</sub> [A]
1.1	2.4
1.5	3.25
2.2	4.55
3.0	6.1
4.0	7.8
5.5	10.3
7.5	13.8

### 4-pole, 3 x 380-415 V

P2 [kW]	I <sub>1/1</sub> [A]
1.1	2.55
1.5	3.4
2.2	4.7
3.0	6.4
4.0	8.2
5.5	11.4
7.5	15.2

The values depend on the motor make.

## Motor protection

Three-phase motors must be connected to a motor-protective circuit breaker.

All three-phase standard motors can be connected to an external frequency converter. The connection of a frequency converter will often overload the motor insulation system, and the motor will be more noisy than during normal operation. In addition, large motors are loaded by bearing currents caused by the frequency converter.

In the case of frequency converter operation, bear the following considerations in mind:

- In 2- and 4-pole motors of frame size 250 and upwards, one of the motor bearings should be electrically isolated to prevent damaging currents from passing through the motor bearings.
- In the case of noise-sensitive applications, the motor noise can be reduced by fitting a dU/dt filter between the motor and the frequency converter. In particularly noise-sensitive applications, we recommend to fit a sinusoidal filter.
- The length of the cable between motor and frequency converter affects the motor load. Check that the cable length meets the specifications laid down by the frequency converter supplier.
- For supply voltages between 500 and 690 V, fit a dU/dt filter to reduce voltage peaks or use a motor with reinforced insulation.
- For supply voltages of 690 V, use a motor with reinforced insulation and fit a dU/dt filter.

## Selection of connection according to application

The table below is intended as a general guide. Selection of connection often depends on local conditions.

Connection		Application																						
Type	Standard	Beverages					Food					Life science and personal care		Industrial applications			Cleaning							
		Beer	Wine	Juice	Alcohol	Soft drinks	Confectionary	Dairy products	Frying oil	Liquid foods (processing)	Syrup	Pumpable meat (packing)	Pure water	Biotechnology products	Perfumes and lotions	Glue and paint	Purification products	Chemical products	Industrial wastewater and effluent	Surface treatment products	Biofuel	CIP	SIP

## Design

The following tables show the design of the different connection types.

### Threads

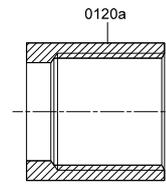

Connection	Standard	Design		
<b>Aseptic threaded connection</b> Typical applications: • Life science/pharmaceutical industry.	DIN 11864-1			TM03 8030 0307
<b>Threaded connection</b> Typical applications: • Food and beverage industry.	DIN 11851			TM03 8031 0307
<b>Threaded connection, SMS Threaded connection, DS</b> Typical applications: • Food and beverage industry.	ISO 2037 DS 722			TM03 8032 0307
<b>Threaded connection, RJT</b> Typical applications: • Life science/pharmaceutical industry.	BS4825-5			TM03 8364 1107
<b>Threaded connection, IDF</b> Typical applications: • Life science/pharmaceutical industry.	ISO 2853 BS4825-4			TM03 8363 1107
<b>Threaded connection (male), GAZ</b> Typical applications: • Food and beverage industry • Other industrial products.	DIN ISO 228			TM03 8716 2307

To be sealed with thread tape

**Threaded connection (female)**

DIN EN 10226-1

Typical applications:  
 • Industrial applications.

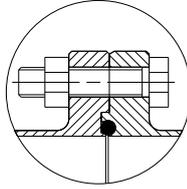

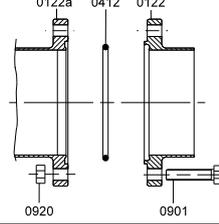

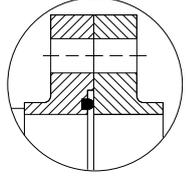

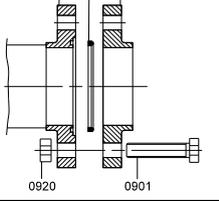

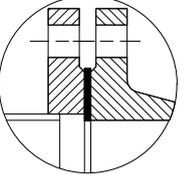

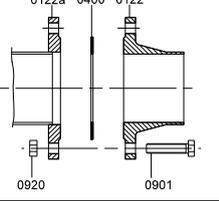

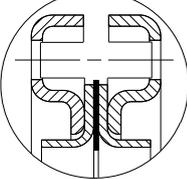

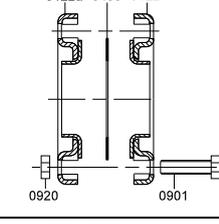

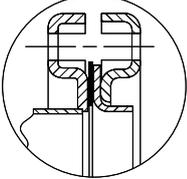

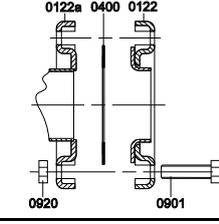

To be sealed with thread tape

TM03 8717 2307

**Description of components**

Pos.	Description
0120a	Threaded connection in pump housing
0120	Threaded connection
0411	Circular joint ring
0412	O-ring
0925	Grooved union nut

## Flanges

Connection	Standard	Design		
<b>Aseptic flange</b> Typical applications: • Life science/pharmaceutical industry.	DIN 11864-2			TM03 8033 0307
<b>Flange, APV-FN1/APV-FG1</b> Typical applications: • Food and beverage industry.	ISO			TM03 8034 0307
<b>Flange (fixed flange)</b> <b>Flange, ANSI 150 and 300 LB RF</b> Typical applications: • Industrial applications.	DIN EN 1092-1 ANSI			TM03 8035 0307
<b>Flange (loose flange)</b> Typical applications: • Industrial applications.	DIN EN 1092-1			TM03 8036 0307
<b>Kremo flange</b> Typical applications: • Industrial applications.	DIN EN 1092-1			TM03 8715 2307

## Description of components

Pos.	Description
0122a	Flanged connection in pump housing
0122	Flanged connection
0400	Gasket
0410	Profile gasket
0412	O-ring
0901	Hexagon head screw
0920	Hexagon nut

## Clamps

Connection	Standard	Design
<b>Clamp</b> <b>Clamp</b> <b>Clamp</b> <b>Clamp Tri-Clamp®/Tri-Clover®</b>	DIN 32676 ISO 2852 BS 4825-3 ASME BPE	
Typical applications: • Life science/pharmaceutical industry.		
<b>Clamp, ISO and SMS</b>	-	
Typical applications: • Food industry • Life science/pharmaceutical industry.		

TM03 8037 0307

## Description of components

Pos.	Description
0121a	Clamp connection in pump housing
0121	Clamp connection
0410	Profile gasket
0501	Clamp ring

## Pumps

Please see subsection construction in the individual pump chapters at the beginning of this data booklet.

## Impellers

Grundfos offers four impeller types suitable for different liquids and applications. Not all impeller types are available for the complete product range.

### Semi-open impeller

GR9394

**Fig. 31** Semi-open impeller

The electro-polished, stainless steel, semi-open impeller is available in three versions, according to the application.

Impeller version	Application	Surface finish
Cast	Industrial/hygienic	3A0 to 3A1
Welded	Industrial/hygienic	3A0 to 3A1
Milled	Industrial/hygienic/sterile	3A2 to 3A3

For surface finish requirements, see page 56.

The impeller is suitable for low-viscosity liquids and liquids containing particles.

The semi-open impeller is not fitted in durietta 0.

### Closed impeller

Two-channel, closed

Standard, closed

GR9391 - GR9392

**Fig. 32** Closed impellers

Both types of electro-polished, stainless steel, closed impeller are available in two versions, according to the application.

Impeller version	Application	Surface finish
Cast	Industrial/hygienic	3A0 to 3A1
Welded	Industrial/hygienic	3A0 to 3A1

For surface finish requirements, see page 56.

The two-channel, closed impeller is suitable for pumped liquids containing solid particles.

The standard, closed impeller is suitable for pumped liquids with a low content of solid particles. This impeller type has the highest efficiency.

The closed impellers are not fitted in durietta 0.

### Free-flow impeller

GR9393

**Fig. 33** Free-flow impeller

The electro-polished, stainless steel, free-flow impeller is available in two versions, according to the application.

Impeller version	Application	Surface finish
Cast	Industrial/hygienic	3A0 to 3A1
Welded	Industrial/hygienic	3A0 to 3A1

For surface finish requirements, see page 56.

The non-clogging, free-flow impeller is designed for pumped liquids with a high content of solid particles or fibres.

### Star impeller

GRA0393p

**Fig. 34** Star impeller

The electro-polished, stainless steel, star impeller is available in one version.

Impeller version	Application	Surface finish
Cast	Industrial/hygienic	3A0 to 3A1

For surface finish requirements, see page 56.

The highly efficient, self-priming star impeller is suitable for pumped liquids with a low content of solid particles.

## Surface treatment

All non-wetted parts of the pumps have the following surface treatment:

1. Priming colour
  - Epoxy resin (RAL 7032)
  - Thickness of film: 50 to 70 µm.
2. Top coat (standard)
  - Epoxy resin (RAL 5010)
  - Thickness of film: 50 to 70 µm.

The durietta 0 has a single coat of polyurethane (RAL 5010) of a thickness of 30 to 40 µm.

## Motors

The motors are totally enclosed, fan-cooled standard motors with main dimensions to IEC and DIN standards. Electrical tolerances to IEC 34.

### Mounting designation

Pump range	Mounting designation to IEC 34-7	
	Horizontal installation	Vertical installation
Euro-HYGIA®		
F&B-HYGIA®		
Contra	IM 1001 (IM B3)	IM 1011 (IM V5)
	IM 3001 (IM B5)	IM 3011 (IM V1)
SIPLA	IM 2001 (IM B35)	IM 2011 (IM V15)
MAXA		
MAXANA		
durietta 0	IM 2001 (IM B35)	IM 3011 (IM V1)

Relative air humidity:	Max. 95 %
Enclosure class:	IP55
Insulation class:	F, to IEC 85
Ambient temperature:	Max. 40 °C (standard motors)
	Max. 60 °C (MG motors, EFF 1).

In humid locations, the lowest drain hole in the motor must be opened. In such cases, the motor enclosure class is IP44.

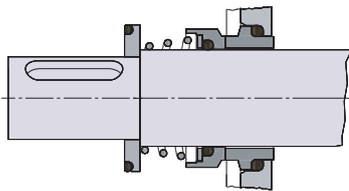

## Mechanical shaft seal

The operating range of the shaft seal depends on the type of shaft seal, the operating pressure and the liquid temperature.

The shaft seal types described below are standard seal types; other shaft seal types are available on request.

### Hygienic applications

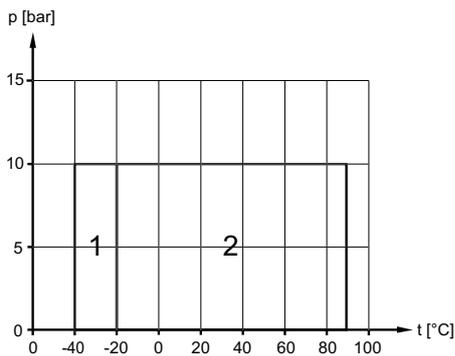

As standard, Grundfos offers a single shaft seal fitted with a metal spring as seal driver. The seal is suitable for hygienic applications.

TM02 9660 3604

**Fig. 35** Single shaft seal for hygienic applications

The single shaft seal has carbon/stainless steel seal faces and EPDM or FKM O-rings.

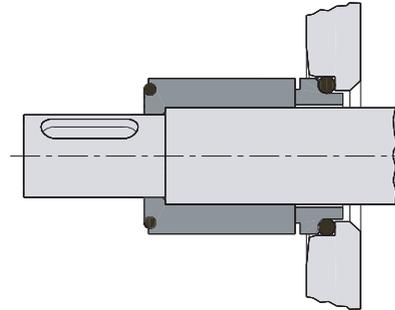

TM03 0121 4104

**Fig. 36** Operating range of shaft seal with metal spring as seal driver for hygienic applications

- 1: Carbon/stainless steel + EPDM
- 2: Carbon/stainless steel + EPDM and carbon/stainless steel + FKM.

### Sterile applications

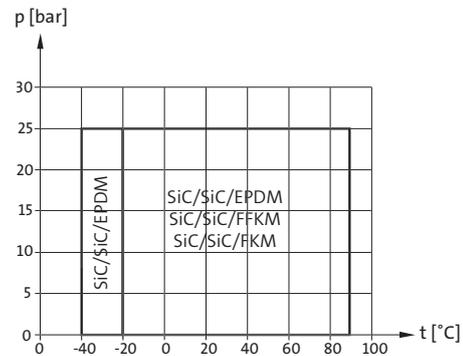

As standard, Grundfos offers a closed O-ring seal for sterile applications.

TM02 9664 3604

**Fig. 37** Single shaft seal for sterile applications.

The O-ring seal has SiC/SiC seal faces and O-rings of EPDM (optionally FFKM (white) or FKM).

TM03 0118 4104

**Fig. 38** Operating range of closed O-ring seal for sterile applications

## EHEDG, QHD and GOST

The design, materials used and surface finish are subject to a variety of national and international rules and regulations, such as the EHEDG recommendations, the QHD criteria and the GOST standard.

### EHEDG

Fig. 39 EHEDG symbol

The EHEDG (European Hygienic Engineering & Design Group) develops guidelines and test methods for the safe and hygienic processing of food.

This ensures the microbiological safety of the end product, for example the pumped medium.

The EHEDG symbol is used by manufacturers to indicate compliance with the EHEDG recommendations.

### QHD

Fig. 40 QHD symbol

The QHD (Qualified Hygienic Design) is a two-phase testing system for the hygienic design and cleanability of components, machinery and plant for aseptic or sterile applications.

This ensures that all surfaces can be cleaned in place (CIP).

The QHD symbol is used by manufacturers to indicate compliance with the QHD criteria.

### GOST

Fig. 41 GOSTR symbol

GOST is the Russian word for "standard", the R (P) stands for Russia. For most products, certification is needed if they wish to sell in Russia. The main products concerned are these:

- materials in contact with food and human beings
- industrial equipment for food, chemical, oil and gas, construction and other industries
- mechanical and electrical goods.

Also concerned are consumer products such as food-stuffs, textiles and clothes, cosmetics and perfumery, domestic goods and toys.

The certificate can be valid for a one-time-only shipment or for a period of 1 or 3 years.

## Certificates and approvals

Grundfos offers the following certificates and approvals:

- Hygienic design certificates (certificates guaranteeing compliance with the EHEDG recommendations, QHD criteria and GOST standard).
- Material certificates (certificates stating material specifications).
- Performance certificates (test reports guaranteeing and certifying test data of QH, current consumption, speed, curves, etc.).
- Authorized test by third party (surveyed performance test).
- ATEX-approved sanitary pumps (according to ATEX Directive 94/9/EC).

The certificates must be ordered with the pump.

## Surface finish of sanitary pumps

In order to meet the demands of the pharmaceutical, food and beverage industries, Grundfos has developed the below surface finish requirements:

Code	Application	Material	Surface finish
3A0.01	Industrial	CrNiMo steel	
3A1.02	Hygienic	CrNiMo steel	Ra ≤ 3.2 µm
3A2.03	Sterile	DIN EN 1.4404/1.4435 (AISI 316L)	Ra ≤ 0.8 µm
3A1.04	Pharmaceutical	DIN EN 1.4435, Fe ≤ 3 %	Ra ≤ 3.2 µm
3A2.05	Sterile	DIN EN 1.4435, Fe ≤ 1 %	Ra ≤ 0.8 µm
3A3.06	Sterile	DIN EN 1.4435, Fe ≤ 1 %	Ra ≤ 0.4 µm
3A3.07	Sterile	DIN EN 1.4404/1.4435 (AISI 316L)	Ra ≤ 0.4 µm
3A2.33	Sterile	DIN EN 1.4404/1.4435 Fe ≤ 3 % (AISI 316L)	Ra ≤ 0.8 µm
3A3.37	Sterile	DIN EN 1.4404/1.4435 Fe ≤ 3 % (AISI 316L)	Ra ≤ 0.4 µm

## Mechanical installation

**Never** install the pump with the motor pointing downwards.

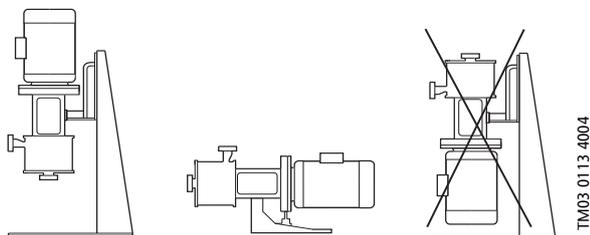

Fig. 42 Installation

The pumps must be installed in such a way that strain from the pipework is not transferred to the pump housing.

When installed outdoors, the motor must be provided with a suitable cover to avoid condensation on the electronic components and to protect pump and motor against the direct effects of the elements.

## Space requirements

### Vertical installation

- Pumps fitted with motors up to and including 4 kW require a 300 mm clearance above the motor. See fig. 43.
- Pumps fitted with motors of 5.5 kW and up require at least a 1 metre clearance above the motor to allow the use of lifting equipment. See fig. 43.

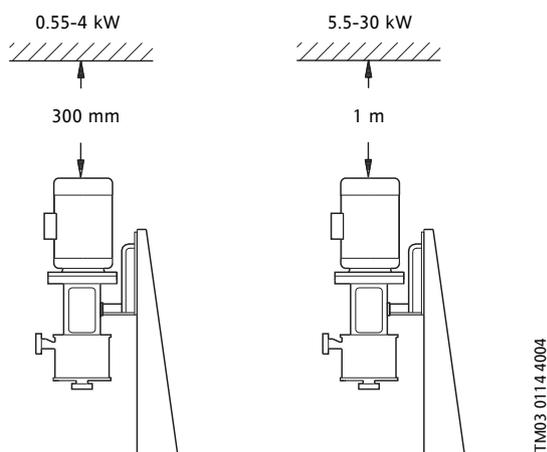

Fig. 43 Vertical installation

### Horizontal installation

- Pumps fitted with motors up to and including 4 kW require a 300 mm clearance behind the motor. See fig. 44.
- Pumps fitted with motors of 5.5 kW and up require a 300 mm clearance behind and a 1 metre clearance above the motor to allow the use of lifting equipment. See fig. 44.

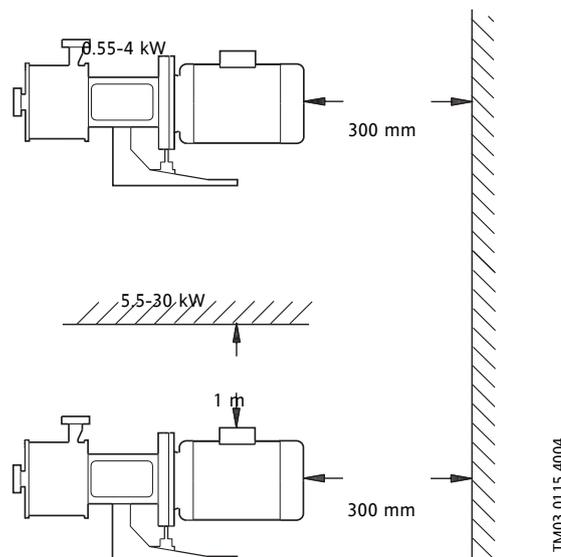

Fig. 44 Horizontal installation

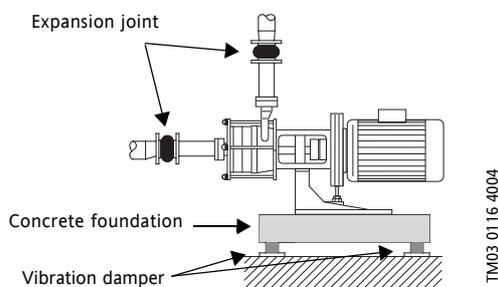

## Elimination of noise and vibration

In order to achieve optimum operation and minimum noise and vibration, consider vibration dampening of the pump. Generally, always consider this for pumps with motors above 11 kW. Smaller motors, however, may also cause undesirable noise and vibration.

Noise and vibration are generated by the rotations in the motor and pump and by the flow in pipes and fittings. The effect on the environment is subjective and depends on correct installation and the state of the remaining system.

### Foundation

Vibration dampening is best achieved by installing the pumps on a plane and rigid concrete foundation. See fig. 45.

**Fig. 45** Example of foundation of a Contra II pump

As a rule of thumb, the weight of a concrete foundation should be 1.5 times the pump weight.

### Vibration dampers

To prevent the transmission of vibrations to buildings, we recommend that you isolate the pump foundation from building parts by means of vibration dampers.

The selection of the right vibration damper requires these data:

- forces transmitted through the damper
- motor speed considering speed control, if any
- required dampening in % (suggested value is 70 %).

Which is the right damper varies from installation to installation, and a wrong damper may increase the vibration level. Vibration dampers should therefore be sized by the supplier.

### Expansion joints

If you install the pump on a foundation with vibration dampers, always fit expansion joints on the pump flanges. This is important to prevent the pump from "hanging" in the flanges.

Install expansion joints to

- absorb expansions/contractions in the pipework caused by changing liquid temperature
- reduce mechanical strains in connection with pressure surges in the pipework
- isolate mechanical structure-borne noise in the pipework (only rubber bellows expansion joints).

**Note:** Do not install expansion joints to compensate for inaccuracies in the pipework such as centre displacement of flanges.

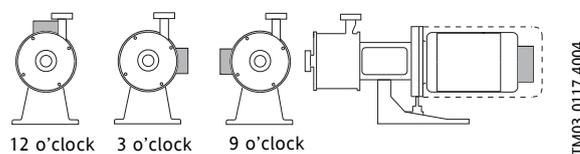

Fit expansion joints at a distance of minimum 1 to 1½ times the nominal flange diameter away from the pump on the suction as well as on the discharge side. This will prevent the development of turbulence in the expansion joints, resulting in better suction conditions and a minimum pressure loss on the discharge side. At high water velocities (> 5 m/s), we recommend you to install larger expansion joints corresponding to the pipework.

Expansion joints with limiting rods can be used to minimise the forces caused by the expansion joints. We always recommend expansion joints with limiting rods for flanges larger than DN 100.

The pipes should be anchored so that they do not stress the expansion joints and the pump. Follow the supplier's instructions and pass them on to advisers or pipe installers.

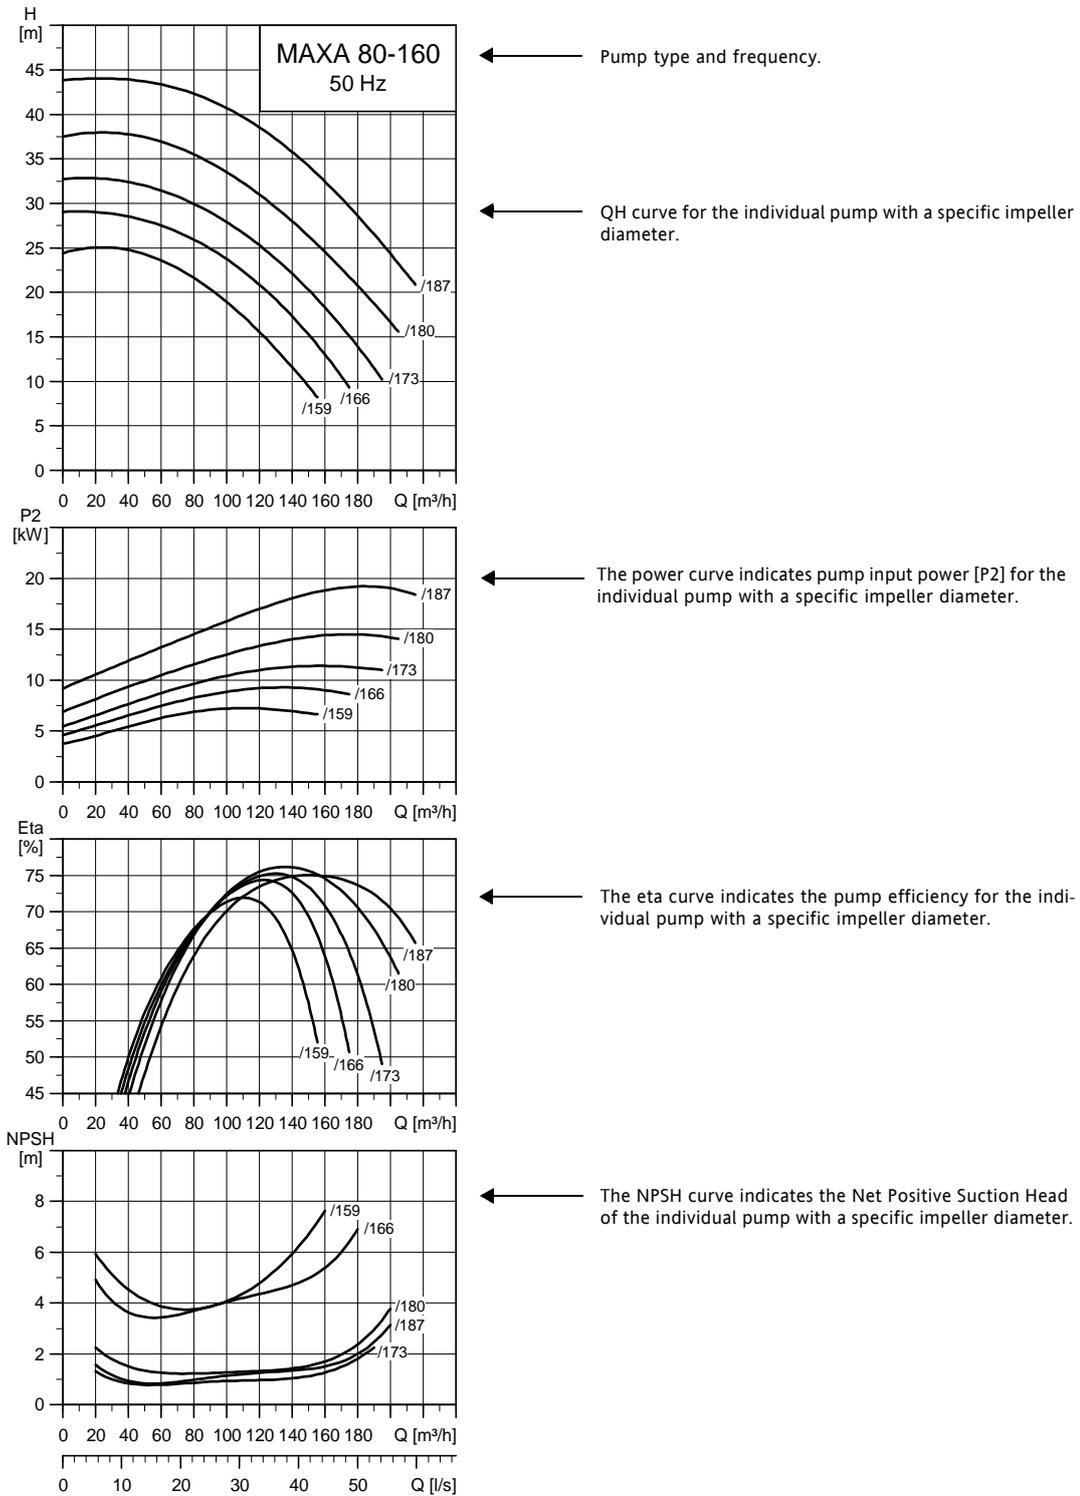

## Terminal box positions

The terminal box positions shown in fig. 46 are possible for all pump ranges.

**Fig. 46** Possible terminal box positions

## How to read the curve charts

TM02 9722 4405

## Curve conditions

The guidelines below apply to the curves shown on the following pages:

### 1. Tolerances to ISO 9906, Annex A.

1 kW < P<sub>2</sub> < 10 kW

Flow rate:	±9 %
Total head:	±7 %
Efficiency:	up to -7 % *

\* Efficiency of motor sizes below 10 kW are calculated on the basis of a formula stated in ISO 9906.

P<sub>2</sub> > 10 kW

Flow rate:	±8 %
Total head:	±5 %
Efficiency:	-5 %

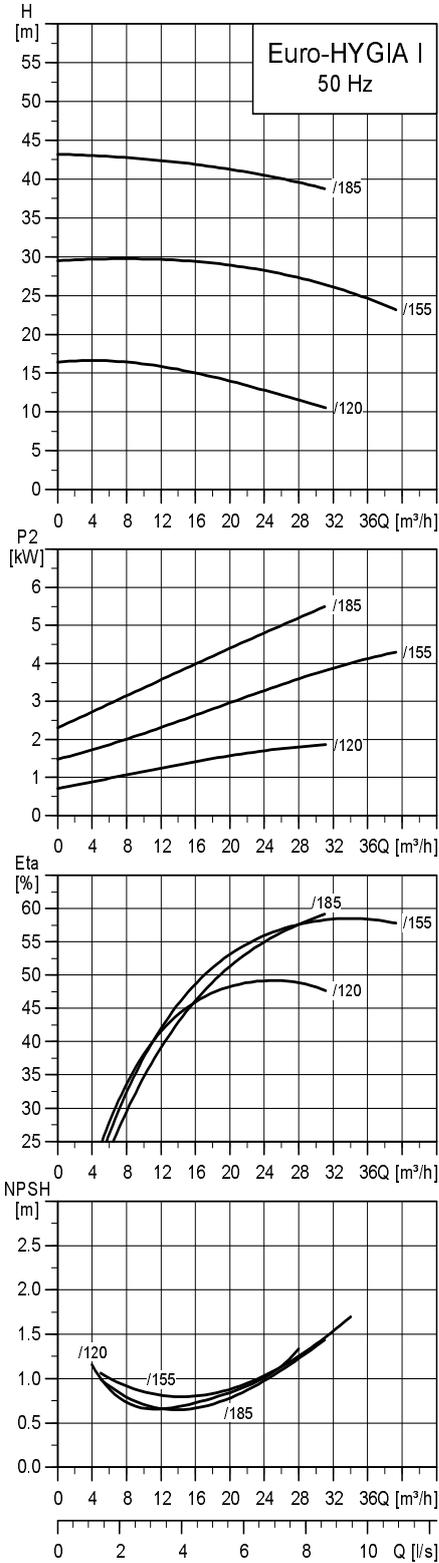

2. QH curves of the individual pumps are shown with expected speed of a three-phase standard motor.
3. Measurements have been made with airless water at a temperature of +20 °C.
4. The curves apply to the following kinematic viscosity:  
 $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt).
5. If the pumped liquid density and/or viscosity is higher than that of water, it may be necessary to use a motor with a higher performance.

- (7) N-Eupex coupling.

## Contra II Adapta<sup>®</sup>-V on stainless steel pedestal with/without suction elbow (frame size 100-160)

For installing, removing and servicing the pump, lifting point should be provided directly above the pump and removable lengths incorporated into the suction line.  
The discharge port is asymmetric; the pump can be drained completely.

TM03 0072 2507

(1) Motor dimensions depend on make; motor dimensions show maximum size.

(2) Flange dimensions are according to DIN EN 1092-1 (DIN 2632). Nominal diameters in parentheses are available on request.

(1) Motor dimensions depend on make; motor dimensions show maximum size.

(2) Flange dimensions are according to DIN EN 1092-1 (DIN 2632).

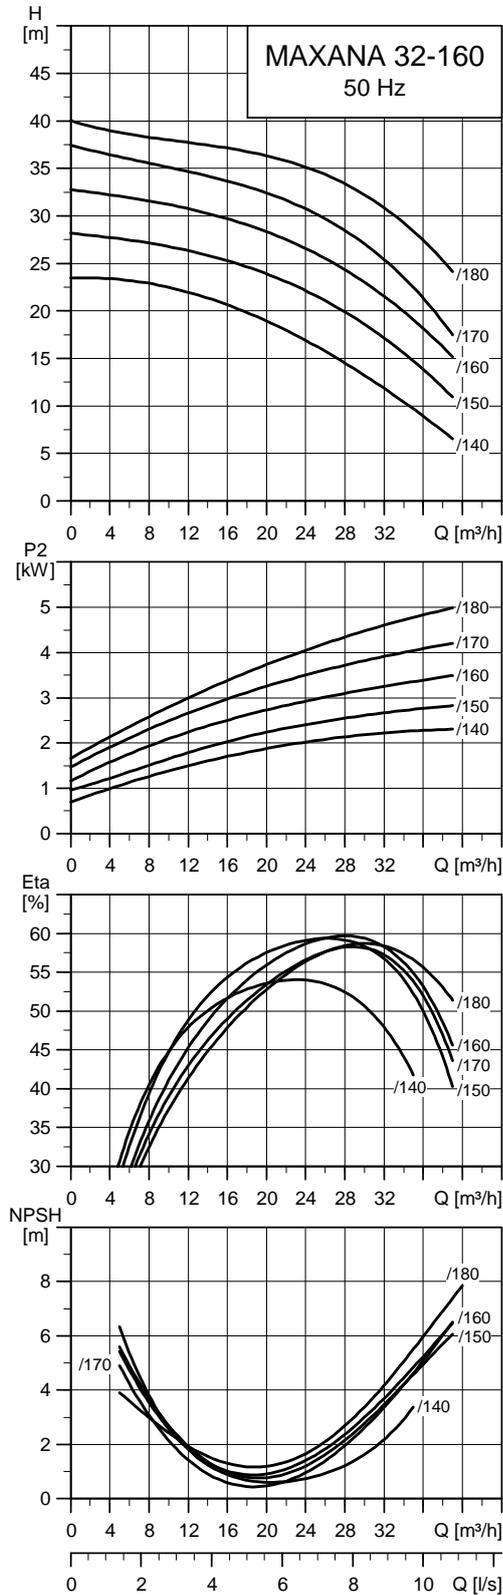

(3) Nominal diameters in parentheses are available on request.

(7) Coupling of our choice.

Larger motors, threaded pipe connections and special flanges are available on request.

Dimensions depend on housing size (DN<sub>s</sub>, DN<sub>d</sub>, a<sub>1</sub>, h<sub>2</sub>). See table of connections, page 49.

- (1) Motor dimensions depend on make; motor dimensions show maximum size.
- (2) Flange dimensions are according to DIN EN 1092-1 (DIN 2632). Nominal diameters in parentheses are available on request.
- (4) Largest diameter of pump without motor.
- (7) N-Eupex coupling.

Dimensions depend on housing size (DN<sub>s</sub>, DN<sub>d</sub>, a<sub>1</sub>, h<sub>2</sub>). See table of connections, page 49.

- (1) Motor dimensions depend on make; motor dimensions show maximum size.
- (2) Flange dimensions are according to DIN EN 1092-1 (DIN 2632). Nominal diameters in parentheses are available on request.
- (4) Largest diameter of pump without motor.

Dimensions depend on housing size (DN<sub>5</sub>, DN<sub>d</sub>, a<sub>1</sub>, h<sub>2</sub>). See table of connections, page 49.

- (1) Motor dimensions depend on make; motor dimensions show maximum size.
- (2) Flange dimensions are according to DIN EN 1092-1 (DIN 2632). Nominal diameters in parentheses are available on request.
- (4) Largest diameter of pump without motor.

## WebCAPS

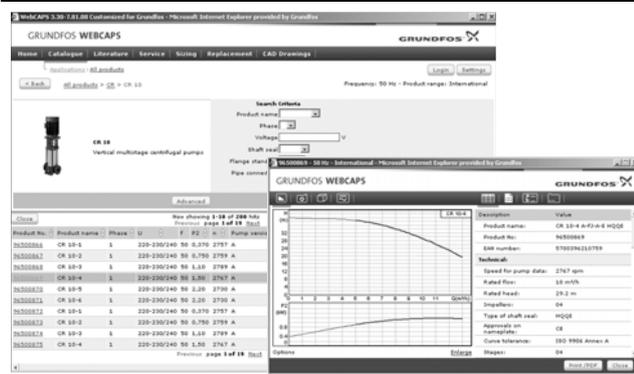

WebCAPS is a **Web-based Computer Aided Product Selection** program available on [www.grundfos.com](http://www.grundfos.com).

WebCAPS contains detailed information on more than 185,000 Grundfos products in more than 20 languages.

In WebCAPS, all information is divided into 6 sections:

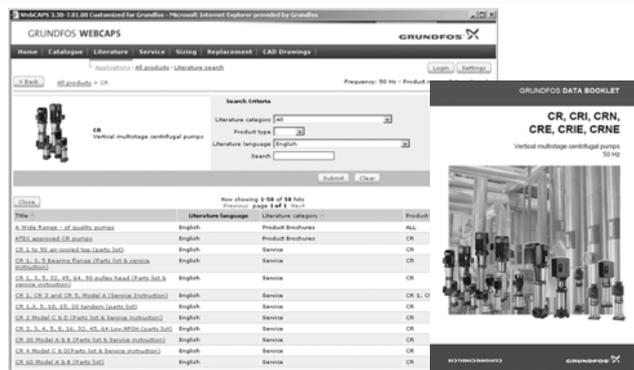

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

### Catalogue

This section is based on fields of application and pump types, and contains

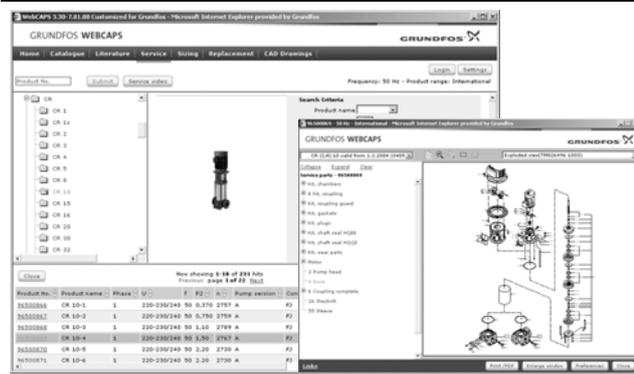

- technical data
- curves (QH, Eta, P1, P2, etc) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

### Literature

In this section you can access all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures, etc.

### Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

Furthermore, this section contains service videos showing you how to replace service parts.

## Sizing

This section is based on different fields of application and installation examples, and gives easy step-by-step instructions in how to

- select the most suitable and efficient pump for your installation
- carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- analyse your selected pump via the built-in life cycle cost tool
- determine the flow velocity in wastewater applications, etc.

## Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

## CAD drawings

In this section it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.
