

# MT3809G Series

## Variable Area

## Metal Tube Variable Area Flowmeters

### Overview

Brooks® MT3809 meter operation is based on the variable area principle. The all metal meter is ideal for a variety of gas, liquid and steam applications. These meters are indispensable where high pressure and/or high temperature operating conditions exist.

The primary meter is available in 316/316L stainless steel as well as with a PTFE liner. But a wide range of corrosion resistant materials of construction are available which makes it a perfect fit for metering of aggressive applications.

A broad range of connection sizes and types such as ASME, DIN and JIS flange choices along with several threaded options provide for flexible installations.

The very popular mechanical indicator option does not require power which reduces installation costs and is a cost-effective solution for flow measurement in hazardous areas. Certified transmitters and alarms both flameproof and intrinsically safe are available for hazardous installations anywhere in the world.

### Product Description

The Brooks Model MT3809 has been the “go to” meter for several years and the choice of Engineering & Procurement Contractors (EPC) and major industrial customers. Brooks is proud to raise the performance of the standard meter by adding these new features and options:

- Alarm function that meets SIL 2 requirements, the perfect product for safety applications
- LCD display with local operator interface without removing the cover which means changes can be made even in hazardous areas
- 316SS flameproof housing that meets IIC/Class 1 Div 1 to handle the toughest hazardous applications
- The broadest range of operating temperatures in the industry, the perfect meter for difficult applications
- Lower flow rates with the current lay lengths which means one meter style can be used for very low to high flow rates
- The new meter is designed to ASME B31.3 and the gasket sealing surface is per ASME, a rugged design that does not require special gaskets at installation
- Weldneck flanges are standard for MT3809 and MT3810 which means full penetration welds that can easily be tested for integrity

MT3809G General Purpose  
Housing

## Features and Benefits

## Product Description

### 316 SS Flameproof Housing

The 3809 flameproof housing has been redesigned and improved. The option is made of 316 stainless steel. This includes housing, cover, bracket and hardware. The new option now meets ATEX gas group IIC/NA class 1 Division 1. This is the highest gas protection rating available. Now this option can be used in more hazardous area applications. This option also has the broadest operating temperature range of any Variable Area meter. The new 3809 can be used in applications from -198°C to +420°C (-325°F to +788°F).

### LCD Display

The 4-20 mA output transmitter is still available with remote analog output but now a LCD display is a new option. The LCD display supplies additional information locally such as totalization, alarm signals and the ability to make parameter changes. The changes can be made by removing the housing cover which is possible in a non-hazardous area. But in a hazardous area the display can be accessed with the cover in place using a supplied magnet.

### Improved Transmitter and Alarm Option

The transmitter and alarm options can be used in applications from -198°C to +420°C (-325°F to +788°F). Every transmitter has HART Revision 7 capability. The transmitter and alarm options will have worldwide approvals including CSA (North America), ATEX (Europe), KOSHA (Korea), NEPSI (China) and TR CU (Custom Union including Russia). The alarm function has a safety certification of SIL 2. This option can be used in the toughest applications including safety systems.

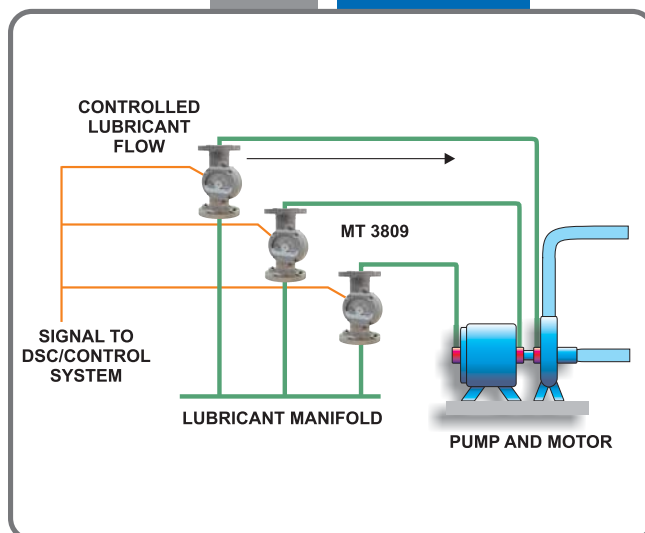

## Product Applications

### Rotating Equipment

Large rotating equipment requires effective and reliable flow monitoring on a number of fluid supplies – like lubrication fluids, coolants, and dry gas seal gasses – to ensure efficient and safe operation.

Brooks variable area meters – such as the MT3809 shown – are commonly used to monitor lube oil and coolant flows. The optimum solution is using a 4-20 mA transmitting variable area meter so that flow can be continuously monitored.

### Basic Flow Control

Many industrial processes require reliable, accurate, and repeatable gas and liquid flow measurement and control. Brooks variable area meters are exceptionally versatile, and are ideal for monitoring process flow, instrument impulse lines, purge gas flows, flows of flushing or cooling media, make-up flows, and reactor gas and liquid feeds.

Many Brooks variable area meters offer flow switches, alarms, or continuous electronic output to allow flow conditions to be monitored and controlled remotely. A variety of valves is also available for setting a flow set-point, and electronic pressure controllers are offered to provide constant flow under varying pressure conditions.

### Offshore/High Pressure

Operators of offshore platforms require reliable products that operate under extreme conditions such as high pressure and difficult environmental conditions. Common offshore applications involve injecting a fluid (many times a proprietary fluid) into the high pressure extraction fluid to either prevent corrosion, freezing of the extraction fluid or adding lubrication. In all cases the goal is to provide local monitoring of the extraction process which improves the overall process yield. The Model 3809 variable area meter is an excellent choice because it is simple, proven, reliable (only one moving part) and is available for operating pressures to 20,000 PSIG/ 1350 bar.

## Product Specifications - Meter

Specifications	MT3809	MT3809 ELF	TFE Lined	MT3810

1. Air flows in scfm are given at 70°F and 14.7 psia    2. Air flows in nm3/h are given at 0°C and 1.013 bar (a)  
3. Sizes 7 & 8 floats are Hastelloy C-276 (Density = 8.94 kg/dm<sup>3</sup>), Sizes 10, 12 & 13 are PVDF (Density = 4.22 kg/dm<sup>3</sup>)  
4. For gas applications operating pressure must be greater than 29 PSIA / 2 bar (a)  
5. Water flows in l/h & gpm are given at 70°F

## Product Specifications - Transmitter

### Design Features

A 2-wire, loop-powered device for ease of wiring and installation

- 4-20 mA analog output for flowrate, with Bell-202 modulated HART communication channel
- User selectable 0% and 100% analog output ranges with optional smoothing
- Flexible (mix & match) units of measure for flowrates, totals, temperatures, densities, etc.
- Two flow totalizers: Resettable and inventory totalization
- User configurable, scaleable pulse output for various engineering units
- Comprehensive alarms for both process flow and internal diagnostic checks
- Easily configured and compatible with other plant equipment

### Description

The transmitter (with or without the alarms, display and pulse output) is a compact microprocessor device designed to interface directly with the Model MT 3809.

The transmitter is HART-programmable for numerous variables such as flow rate, totalization, calibration factors, and high-low alarm parameters. It is programmable with easy-to-use hand held configurators. Prior to shipment, commonly used default values are programmed by Brooks to ensure ease of operation and quick startup. However, parameters may be reprogrammed by the user if needed flow rate information may be viewed locally at the meter scale, LCD display or displayed remotely.

<b>Power Supply Transmitter</b>	21 to 30 Vdc: (2-wire current loop transmitter) 4-20 mA analog output with HART data. Update rate: 4 times per sec. Range: 3.8 to 22.0 mA.
<b>Two Alarm Outputs (open collector)</b>	Optically isolated outputs assignable to alarms. <ul style="list-style-type: none"> <li>• Max. off-state voltage: 30 Vdc</li> <li>• Max. off-state current: 0.05 mA</li> <li>• Max. on-state voltage: 1.2 Vdc</li> <li>• Max. on-state current: 20 mA</li> </ul>
<b>One Pulse Output (open collector)</b>	Optically isolated. Scaleable to a variety of engineering unit systems (pulses per liter, gallons, etc.). <ul style="list-style-type: none"> <li>• Range: 1 Hz to 1 kHz</li> <li>• Max. off-state voltage: 30 Vdc</li> <li>• Max. off-state current: 0.05 mA</li> <li>• Max. on-state voltage: 1.2 Vdc</li> <li>• Max. on-state current: 20 mA</li> </ul>
<b>Temperature Specification</b>	See Temperature Cut-off Table on page 10
<b>Electrical Connector</b>	M20 x 1.5 according to ISO, 1/2" NPT (F), 3/4" NPT (F)
<b>Linearity</b>	Less than 1% at max. current.
<b>Temperature Influence</b>	Less than 0.04% per °C.
<b>Voltage Influence</b>	Less than 0.002% / Vdc.
<b>Load Resistance Influence</b>	± 0.1% full scale.

## Product Specifications - Inductive Alarm Switches

### Design Features

- 1 or 2 normally open inductive limit switches
- Optional intrinsically safe power supply/amplifier/relay unit
- For low or high limit signaling/switching
- Front adjustable

Relay Power Supply - recommended

### Description

One or two electronic limit switches can be installed in the indicator housing to allow initiation of signaling or switching functions on a preset flow value. The limit switch operates as a slot initiator that is inductively actuated by a disc mounted on the pointer shaft. Any flow value can be used for setting the limit value by sliding the initiator along the indicator scale. Minimum setting distance between two limit switches is approximately 40% full scale. The position of the initiator also serves to visually indicate the set value. Settings can be adjusted by removing the indicator cover, loosening, moving and retightening of the alarm indication needle, and replacement of the indicator front cover.

<b>Power Supply</b>	5 - 25 Vdc: (8 Vdc nominal)
<b>Impedence</b>	- Approximately 1 kohm with cam absent - Approximately 8 kohm with cam present
<b>Ambient and Operating Temperature</b>	See Temperature Cut-off Table on page 10
<b>Electrical Connector</b>	M20 x 1.5 according to ISO 1/2" NPT (F) or cable gland 8-11 mm

## Approval Certificates for Meters, Transmitters and Alarms

### Approval Certificates

#### Special conditions for safe use (ATEX/IECEX)

For information regarding the dimension of the flameproof joints the manufacturer shall be contacted.

### Process and Ambient Temperature Limits: Flame Proof (Exd)

#### Process and Ambient Temperature limits

Temperature Class	T6	T5	T4	T3	T2	T1
Maximum Ambient Temperature	≤ 70	≤ 70	≤ 65	≤ 58	≤ 47	≤ 32.5
Maximum Process Temperature (°C)	85	100	135	200	300*	420*

\* For application with process temperature equal to or greater than 300°C heat shield and customer supplier installation required. Please refer to installation manual for details

#### Additional limitations by model type:

Model	Maximum Process Temperature (°C)
Meters with Flanges or Male Threads	420°C
Meters with Female Threads	300°C
ELF Meters	300°C
ETFE Lined Meters	150°C

## Approval Certificates for Meters, Transmitters and Alarms (continued)

Hazardous Location Certification: Intrinsic Safety (ia) / Non-sparking (nA)

**Model Type : Intrinsic safety (ia) / non-sparking (nA) / Enclosure dust (tc)**

## Brooks Service and Support

Brooks is committed to assuring all of our customers receive the ideal flow solution for their application, along with outstanding service and support to back it up. We operate first class repair facilities located around the world to provide rapid response and support. Each location utilizes primary standard calibration equipment to ensure accuracy and reliability for repairs and recalibration and is certified by our local Weights and Measures Authorities and traceable to the relevant International Standards.

Visit [www.BrooksInstrument.com](http://www.BrooksInstrument.com) to locate the service location nearest to you.

### START-UP SERVICE AND IN-SITU CALIBRATION

Brooks Instrument can provide start-up service prior to operation when required. For some process applications, where ISO-9001 Quality Certification is important, it is mandatory to verify and/or (re)calibrate the products periodically. In many cases this service can be provided under in-situ conditions, and the results will be traceable to the relevant international quality standards.

### CUSTOMER SEMINARS AND TRAINING

Brooks Instrument can provide customer seminars and dedicated training to engineers, end users, and maintenance persons.

*Please contact your nearest sales representative for more details.*

### HELP DESK

In case you need technical assistance:

Americas ☎ 1 888 554 FLOW

Europe ☎ +31 (0) 318 549 290

Asia ☎ +81 3 (0) 5633 7100

Due to Brooks Instrument's commitment to continuous improvement of our products, all specifications are subject to change without notice.
