**Edition 5.2013** 

**Power Line Heavy Duty** TX 750 – TX 20000

Would you like to order this product? All available information at kaller.com.

# Power Line Heavy Duty – a crossover between the ISO standard TU and the Powerline X Series

TX springs combine the high forces of the X springs with the outer dimensions and stroke lengths of the TU springs.

#### **KALLER - THE SAFER CHOICE**

# Training Safety

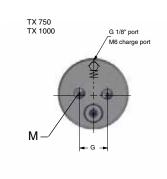

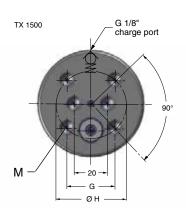

# Reliability

# Performance and design features

- Initial forces from 7,400 to 200,000 N
- Side or bottom charging ports for link-system connection
- Upper C-groove, lower U-groove and bottom threaded holes allow for various standard mounting possibilities
- Optional bottom port for hose/hose-less baseplate connection. For more information, see the Hose-less Baseplate brochure.

# Mounting possibilities

# Basic informationPressure mediumNitrogenMax. charge pressure150 bar (at 20° C)Min. charge pressure25 bar (at 20° C)Operating temperature0 to +80°C

Force increase by temperature...... ±0.3%/°C

Recommended max. strokes/min .....  $\sim$  15 -100 (at 20° C)

 Max. piston rod velocity
 1.6 m/s

# The Safer Choice

Introduced in 1983, the KALLER gas spring technology quickly led to world-wide demand. The Safer Choice - Training, Safety and Reliability - has always been a KALLER top priority for providing the safer working environment. We recommend looking through all available KALLER features when selecting gas springs and gas or hose linked systems.

# **KALLER Training Program**

TRAINING. Without doubt the KALLER Training Program is the best and most creative way to fully understand and appreciate the importance of the safety and reliability features.

## PED approved for 2 million strokes

RELIABILITY. Our 2 million stroke PED approval ensures safer component cycle life.

# Flex Guide™ System

RELIABILITY. Prolongs service life, allows for more strokes per minute and offers greater tolerance to lateral tool movements.

# Dual Seal<sup>™</sup> Link Systems

RELIABILITY. Fewer production interruptions due to leakage caused by vibration. Simplified installation thanks to the non-rotation feature.

#### **Overstroke Protection System**

SAFETY. When a gas spring is overstroked, this helps reduce the risk of tool damage or injury.

## **Overload Protection System**

SAFETY. Jammed cam or tool part being forced by gas springs? This will help reducing such risks.

# **Overpressure Protection System**

SAFETY. Vents the spring if the internal gas pressure exceeds the maximum allowable limit to prevent accidents.
