Price				

In the event that problems with cable or bar sizes for the line to be protected do not allow to use above mentioned toroids (Ø hole max. 300mm), it is possible to use measuring current transformers with 5A (class 0.5 or 1) secondary winding together with a summation toroid **TD55** manufactured according to the used C.T. ratios. For connection with toroids with ratio higher than 400/5A, the  $I_{\Delta n}$  intervention current values which can be selected on the earth leakage relay are multiplied by 10.

Reliability of differential protection depends also on the switch opening circuit. Delta TCS monitors the release circuit working order for one or two switches with current launching coil. It reports the opening circuit breakdown by displaying the alarm (front LED's) and intervention of output relay.
