

# BRECO® Components

## for Polyurethane Timing Belts

updated version

Keeping things moving!

Keeping things moving!

## Keeping things moving!

BRECO has been a market leader in terms of innovation and quality in the field of polyurethane timing belt technology for over 40 years. Our 250 employees produce timing belts and toothed pulleys at our main plant in Porta Westfalica.

Our longstanding experience combined with the consistent use of only high-quality materials has established the reputation of BRECO products throughout the world. Not only the quality but also the service via select sales partners and the joint development of our individual solutions are an important reason for many users to opt for the brand BRECO.

Synchronising pulleys, synchronising shafts, tension rollers, clamping elements and tensioners, optimised to BRECO®- and BRECOFLEX® polyurethane timing belts offer customers the functional reliability they wish for their application. A wide range of standard products for simple and complex applications and the range of individually adapted synchronising pulleys for special requirements with regard to function and quality provide the right solution for almost all drive tasks. Special surface coatings, for example hard coating, anodising, galvanising or browning, ensure better corrosion and wear performance.

BRECO GmbH & Co. Zahnscheiben KG sets great store by innovative creativity, not only in the area of manufacturing high-quality products but also when it comes to using materials with ecology in mind.

After the Waste Electrical and Electronic Equipment Directive 2002/95/EC came into effect in Germany, BRECO converted its entire material programme to materials compliant with this directive. In particular, we - in contrast to most other timing belt manufacturers - no longer use the previous standard material AlCuMgPb (DIN 1725) because this contains the elements lead (Pb), cadmium (Cd), mercury (Hg) and hexavalent chromium (Cr (VI)). This material has been replaced by lead-free AlCu4MgSi (EN AW-2017A), whose strength even surpasses that of the material used previously.

### Quality and service life - your price benefit

The quality of a timing belt pulley is crucial for the functioning, fault-free running and service life of the timing belt drive.

Timing belt drives have become increasingly important in almost all areas of mechanical engineering, plant and vehicle construction in the past few decades. The following advantages over chain drives and positive-fit belt drives (flat and V-belt) are the reason for this:

- Greater positioning and transmission accuracy
- Low-friction operation
- Less moving mass (lower moments of inertia, better dynamics)
- No need for maintenance

The significance of timing belt drives will continue to grow due to the rising demands for environmental compatibility and precision.

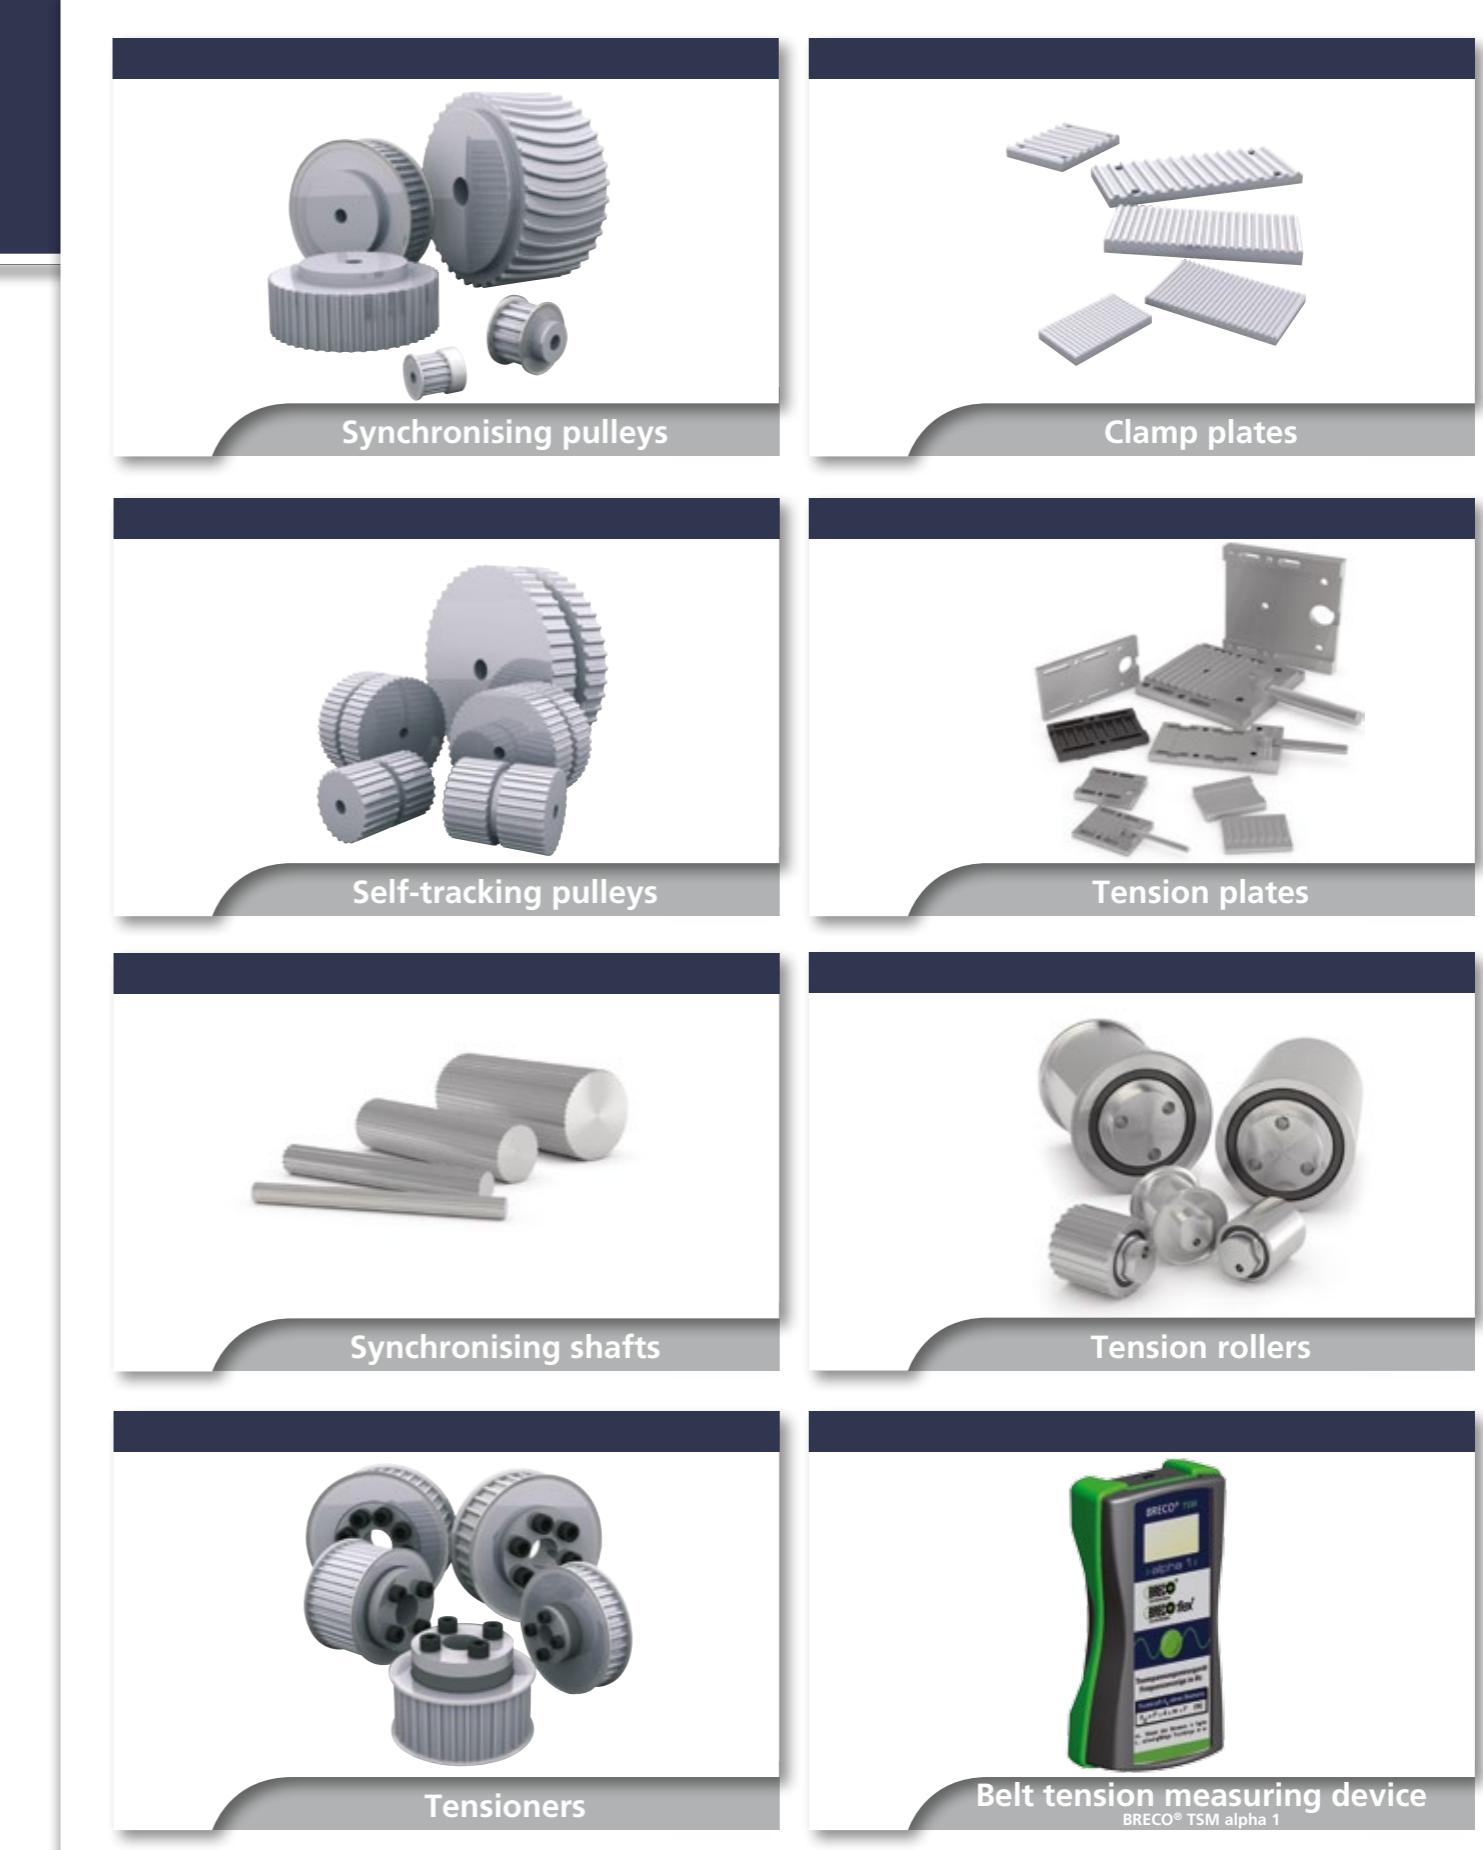

It is the aim of every design engineer to design power transmission belts so that the tribological loss parameters of friction and wear remain as low as possible. In the case of timing belts drives, this calls for an optimum interplay of belt and pulley (precisely coordinated transmission performance in terms of kinematics) and a high degree of precision in the manufacturing process with respect to dimensional accuracy, concentric running, balance and surface quality. We therefore recommend combining BRECO® timing belts with BRECO® toothed pulleys – as this will ensure the best possible transmission performance.

## Product mix

## Synchronising pulleys

### Materials for synchronising pulleys

BRECO provides various materials for diverse areas of application for synchronising pulleys. We only use pressed and drawn semi-finished products so that the technical properties of our products are retained over the entire area of application, thus ensuring functional reliability.

Standard materials					
Material	Material no., Abbreviation as per DIN EN	Tensile strength [N/mm <sup>2</sup> ]	Yield strength Rp0,2 [N/m <sup>2</sup> ]	Dimensions and use	Coatings, Special features
AlCuMg1 AlCu4MgSi(A)	3.1325 EN AW-2017A	360-400	220-250	Up to ø 250 mm components subject to high and vibration stress, compliant with the Waste Electrical and Electronic Equipment Directive	Good anodising capacity
AlMgSi1 (F30) AlSiMgMn	3.2315.72 EN AW-6082	310-350	240-320	Up to ø 400 mm good welding capacity, very good corrosion resistance, compliant with the Waste Electrical and Electronic Equipment Directive	Colourless anodising, hard anodising
AlZnMgCu 0,5 (F45) AlZn5Mg3Cu	3.4345.71 EN AW-7022	410-450	330-370	High-strength aluminium alloy for components subject to high stress, capable of being welded and eroded, compliant with the Waste Electrical and Electronic Equipment Directive	Natural and coloured anodising, hard coating
AlMg3 (F19) AlMg3	3.3535.07 EN AW-5754	190-240	90-120	Up to ø 250 mm and flat material seawater resistant, compliant with the Waste Electrical and Electronic Equipment Directive	Natural and coloured anodising, hard coating
AlMg4,5Mn (F27) AlMg4,5Mn0,7	3.3547.10 EN AW-5083	275	110-125	Flat material for clamp connectors, good welding capacity, suitable for low temperature ranges, seawater resistant, compliant with the Waste Electrical and Electronic Equipment Directive	Natural and coloured anodising, hard coating

### Material recommendation for synchronising pulleys made from steel

Material / Material no.	Use	Tensile strength [N/mm <sup>2</sup> ]	Strain limit / Yield strength [N/mm <sup>2</sup> ]	Hardenability
11SMn30/ 1.0715	Standard material up to ø 160 mm, parts for low to medium stress	380 - 570	min. 245	----
16MnCrS5+FP / 1.7131	Application steel – available up to ø 380 mm, parts for low to medium stress	780 - 1080	440	41-49 HRC
C45 / 1.0503	Quenched and tempered steel, parts for low to medium stress	580	305 - 370	55-62 HRC
42CrMo4 / 1.7225	Components with high stress	100 - 1200	650-900	53-62 HRC

### Material recommendation for synchronising pulleys made from stainless steel

Material / Material no.	Use	Tensile strength [N/mm <sup>2</sup> ]	Yield strength Rp0,2 [N/mm <sup>2</sup> ]
X5CrNi 1810 / VA 1.4301	Good corrosion resistance, welding capacity, suitable for food	550 - 750	235
X6CrNiMoTi 17-12-2 / VA 1.4571	Corrosion resistant (also in welded state), Suitable for the food and beverage industry, Chemical industry	540 - 690	240

## Surface treatment

### Surface refinement for synchronising pulleys made from aluminium

Surface treatment	Use	Brief description
Anodising	Decorative corrosion protection for the surface  The layer hardness is in the range 250-350 HV, the oxide layer resulting from anodising ensures very good resistance to wear and prevents corrosion symptoms.  Anodised components exhibit tremendous abrasion strength and can be provided with special glide properties for particular applications so that the adhesive abrasion is virtually zero. The aluminium oxide layers are very temperature resistant and can be heated to 2,000°C.	Layer thickness to max. 20µm  Available in the versions: natural black uncoloured (silver)
Hard anodising Hard anodising or hard coating	Wear protection  Optional: + PTFE Wear protection  The layer hardness is in the range up to 550 HV The hard anodising (hard coatings) means significantly harder (up to 550 Vickers), denser and also thicker oxide layers than with normal anodising.	Layer thickness 30 -80µm  Teflon coating for improved glide properties
Easy Glide	A Teflon-based low-friction paint coating for noise reduction and optimisation of the glide properties in the run-in area. Suitable for all aluminium and steel toothed pulleys in the application range from -40°C to +180°C	Layer thickness 10- 30µm

### Surface refinement for synchronising pulleys made from steel

Surface treatment	Use	Brief description
Galvanize	Corrosion protection for all steel alloys	Layer thickness 5 to 8µm Toothed pulleys washers are coated including fits.
Browning	Corrosion protection for all steel alloys	Decorative: Colour black Corrosion protection for dry internal areas
Chemical Nickel plating	Corrosion protection	All steel and aluminium alloys Contour-true layer structure, hence also suitable for threads and complex geometries
Plasma nitriding	Wear protection	All steels containing carbon Low-distortion surface hardness method
Easy Glide	A Teflon-based low-friction paint coating for noise reduction and optimisation of the glide properties in the run-in area. Suitable for all aluminium and steel toothed pulleys in the application range from -40°C to +180°C.	All steels containing carbon Improved glide properties Layer thickness 30µm

### Surface refinement for synchronising pulleys made from VA (material no. 1.4301)

Surface treatment	Use	Brief description
Electrochemical pickling and polishing	Food industry	Smoothing the surface roughness makes cleaning easier and helps prevent germs.

**Machining/Special geometries according to customer requirements**

The ever-increasing requirements for low-friction, low-noise and precise drive elements continually present us with new challenges. Thanks to modern production technology, BRECO can offer its customers extensive machining options as well as special geometries for individual adaptation of the synchronising pulleys to the relevant application. The combination with the optimised BRECO® or BRECOFLEX® timing belts results in drive elements that ensure a very high degree of functional reliability.

Turned groove for lightweighting

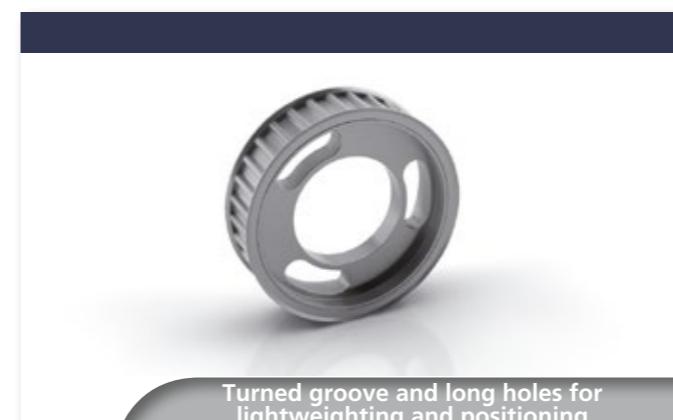

Bores for lightweighting

Slotted hub for fastening

Hubs on both sides

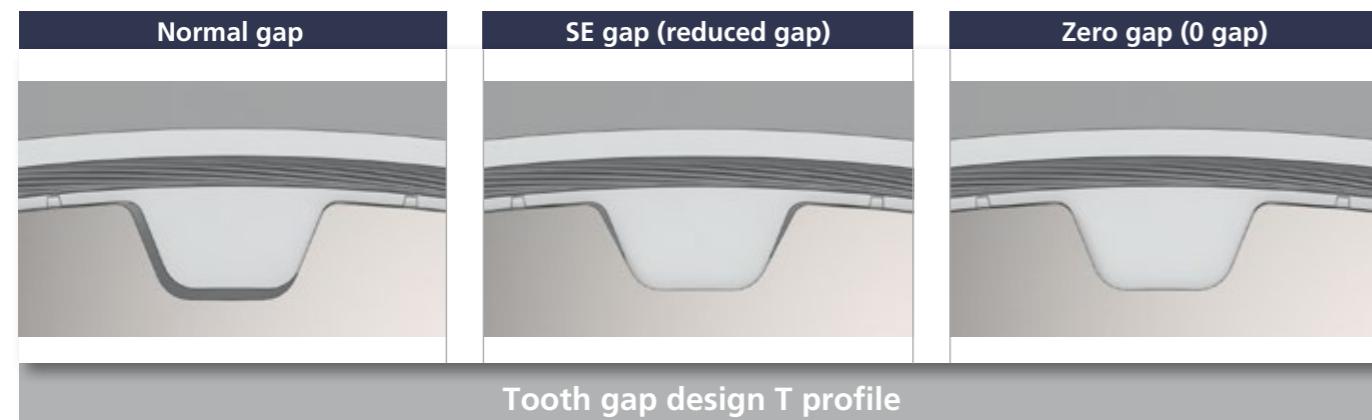

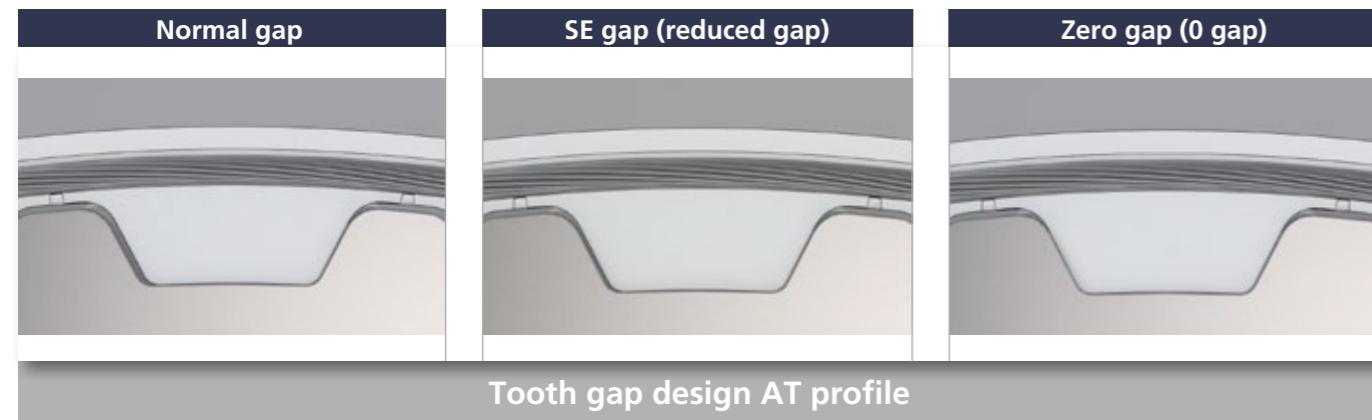

Turned groove and long holes for lightweighting and positioning

### Tooth gap forms

Timing belts are positive fitting drive elements. They work slip-free with the associated synchronising pulleys. BRECO- and BRECOFLEX- timing belt drives can also be optimised to motion transmission that is low in flank play.

For especially high requirements with respect to the accuracy of the motion transmission, the SE or zero gap can be used for some profiles and divisions in compliance with certain prerequisites. Our sales partners will be pleased to help with the technical design of your drive.

### Overview of the available tooth gaps

Tooth gap design	Synchronising pulley T profile and AT20		Synchronising pulley AT profile (without AT20)	Imperial profile
	Number of teeth $\leq 20$	Number of teeth $> 20$	all teeth	all teeth
Normal gap	-	Standard	Standard	Standard
SE gap	Standard	Optional	Optional	-
Zero gap (0 gap)	Optional	Optional	Optional	-

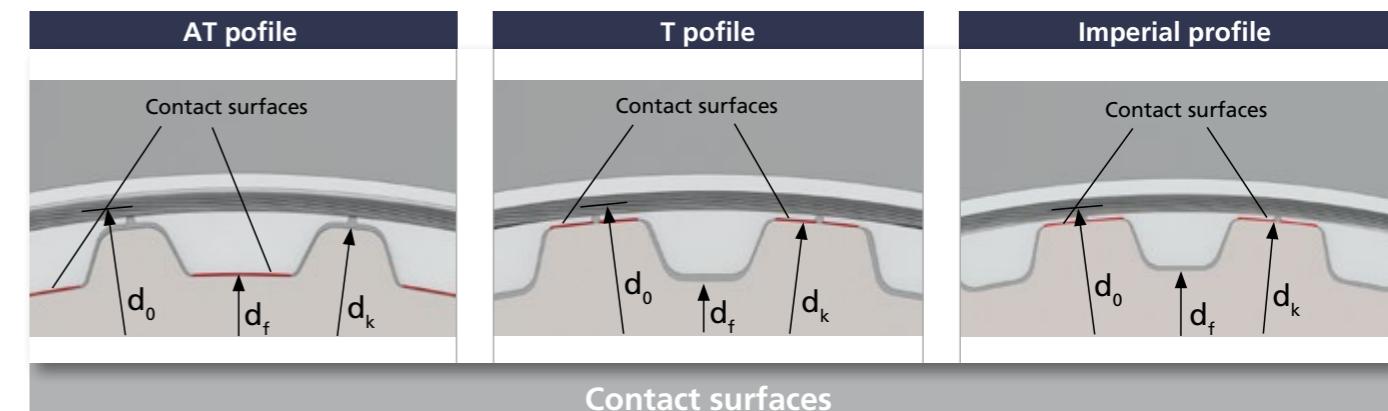

### Ordering information:

The standard gap form for the relevant profiles does not have to be listed separately when ordering. Only the optional gap form has to be indicated when ordering, as shown in the order example.

**Synchronising pulley Al 70 AT10 -SE / 25 - 2 hub 65x6 d=30 H7 with groove**

Material	
Total width $B_N$	
Type / pitch	
Tooth gap design	SE
Number of teeth	70
Number of flanges	2
Hub dimension $d_{h, xlN}$	65
Bore	30
Groove according to DIN 6885	

### Contact surfaces between timing belt and synchronising pulley

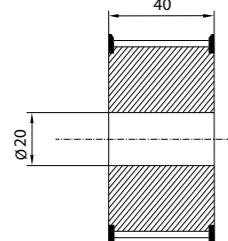

$d_0$ : Pitch circle diameter  
 $d_f$ : Root diameter  
 $d_k$ : Pulley outside diameter

## Versions and ordering information

When using the standard order text, you will receive a product without a drawing, which matches the timing belt program with respect to function and quality.

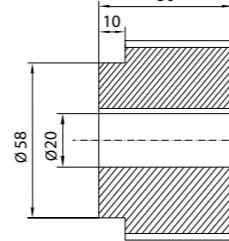

The order texts for various designs are listed in the following representations.

**Synchronising pulley without hub**

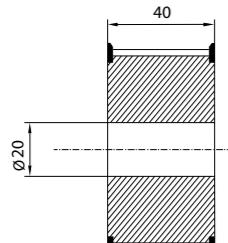

Synchronising pulley Al 40 AT10/24-2 d=20 H7

**Synchronising pulley with hub**

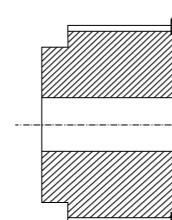

Synchronising pulley Al 50 AT10/24-0 hub  
Ø58x10 d=20 H7 with groove

**Synchronising pulley with 2 flanges**

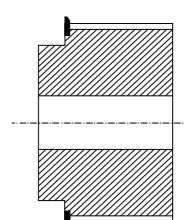

Synchronising pulley Al 40 AT10/24-2 d=20 H7

**Synchronising pulley with 1 flange opposite the hub side**

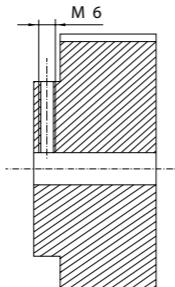

1 flange opposite the hub side: -1g

**Synchronising pulley with 1 flange on the hub side**

1 flange on the hub side: -1a

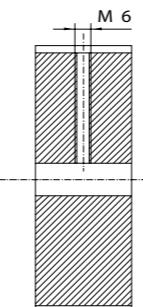

**Synchronising pulley with fastening bore**

Threaded bore M6, centre, hub

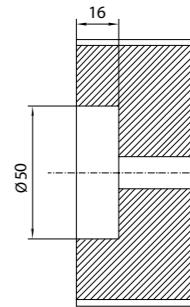

## Versions and ordering information

**Synchronising pulley with fastening bore**

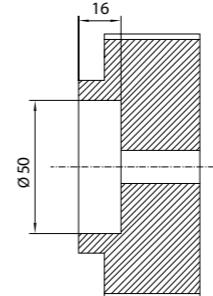

Threaded bore M6, centre tooth

**Synchronising pulley with turned groove**

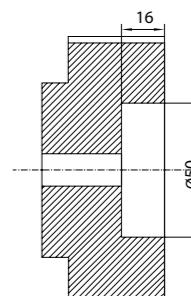

Turned groove Ø50x16 deep

**Synchronising pulley with turned groove**

Turned groove Ø50x16 deep hub side

**Synchronising pulley with turned groove**

Turned groove Ø50x16 deep opposite hub

**Further ordering codes:**

- Thread M4 centre of meshing on groove (opposite groove)
- Thread M4 centre of meshing in tooth gap (on tooth)
- Thread M4 centre of hub, 90° offset to groove
- 2 threads M4 centre of hub, 90° and 180° offset to groove

**Synchronising pulley Al 70 AT10 / 25 - 2 Hub 65x6 d=30 H7 with groove**

Material

Total width  $B_N$

Type / pitch

Number of teeth

Number of flanges

Hub dimension  $d_N \times l_N$

Bore

Groove according to DIN 6885

### Important information for the user of this catalogue

Please note that the effective circular diameters  $d_0$  for synchronising pulleys and synchronising shafts represent theoretical values, while actual values form the basis in the online calculation program „belt pilot“.

#### Flanges

Zinc plated steel is used as the standard material. The user is to determine special executions.

Mounting is achieved by flaring or bolding the flange, depending on the tooth profile and number of teeth used.

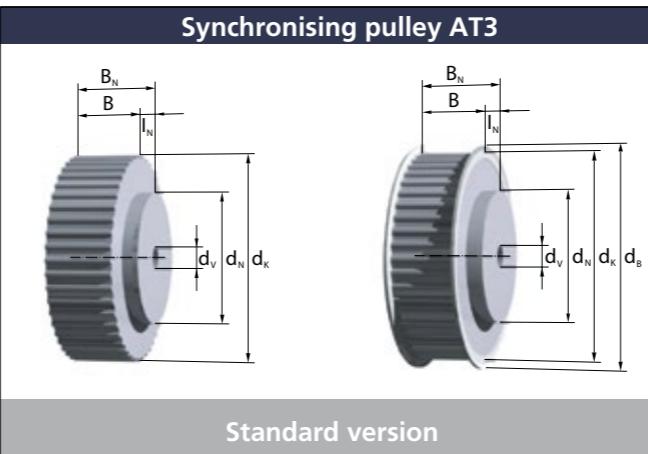

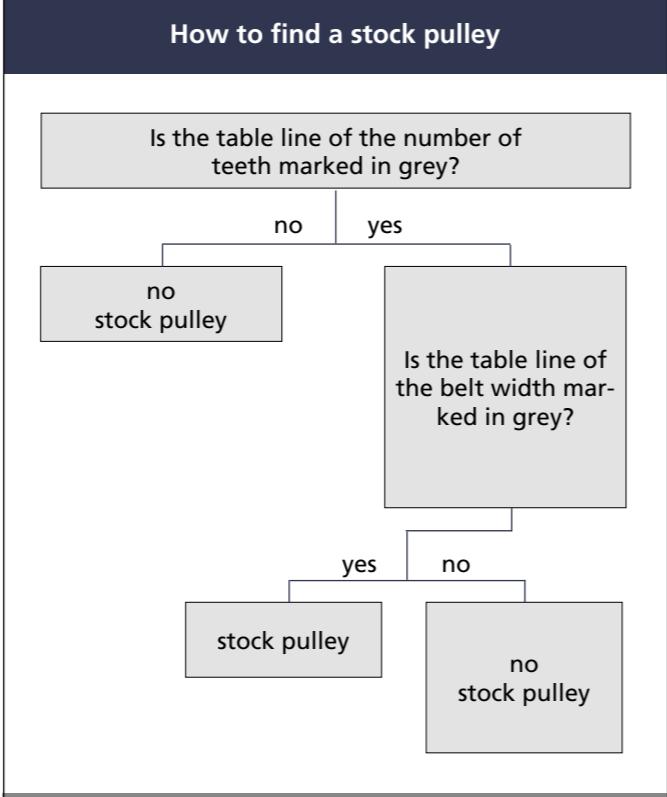

#### Tolerances

The centre borings made in H7, if there are no other requirements.

All not toleranced dimensions are manufactured in the tolerance class „medium“ according to DIN 7168.

#### Designation

- $z$  = Number of teeth
- $d_0$  = Pitch circle diameter
- $d_k$  = Pulley outside diameter
- $d_b$  = Flange diameter
- $d_v$  = Diameter of pre-bore
- $d_{max}$  = max. bore diameter without feather key groove for synchronising pulleys with flanges, with maximum pre-boring, no hub is required

### Assembly instructions

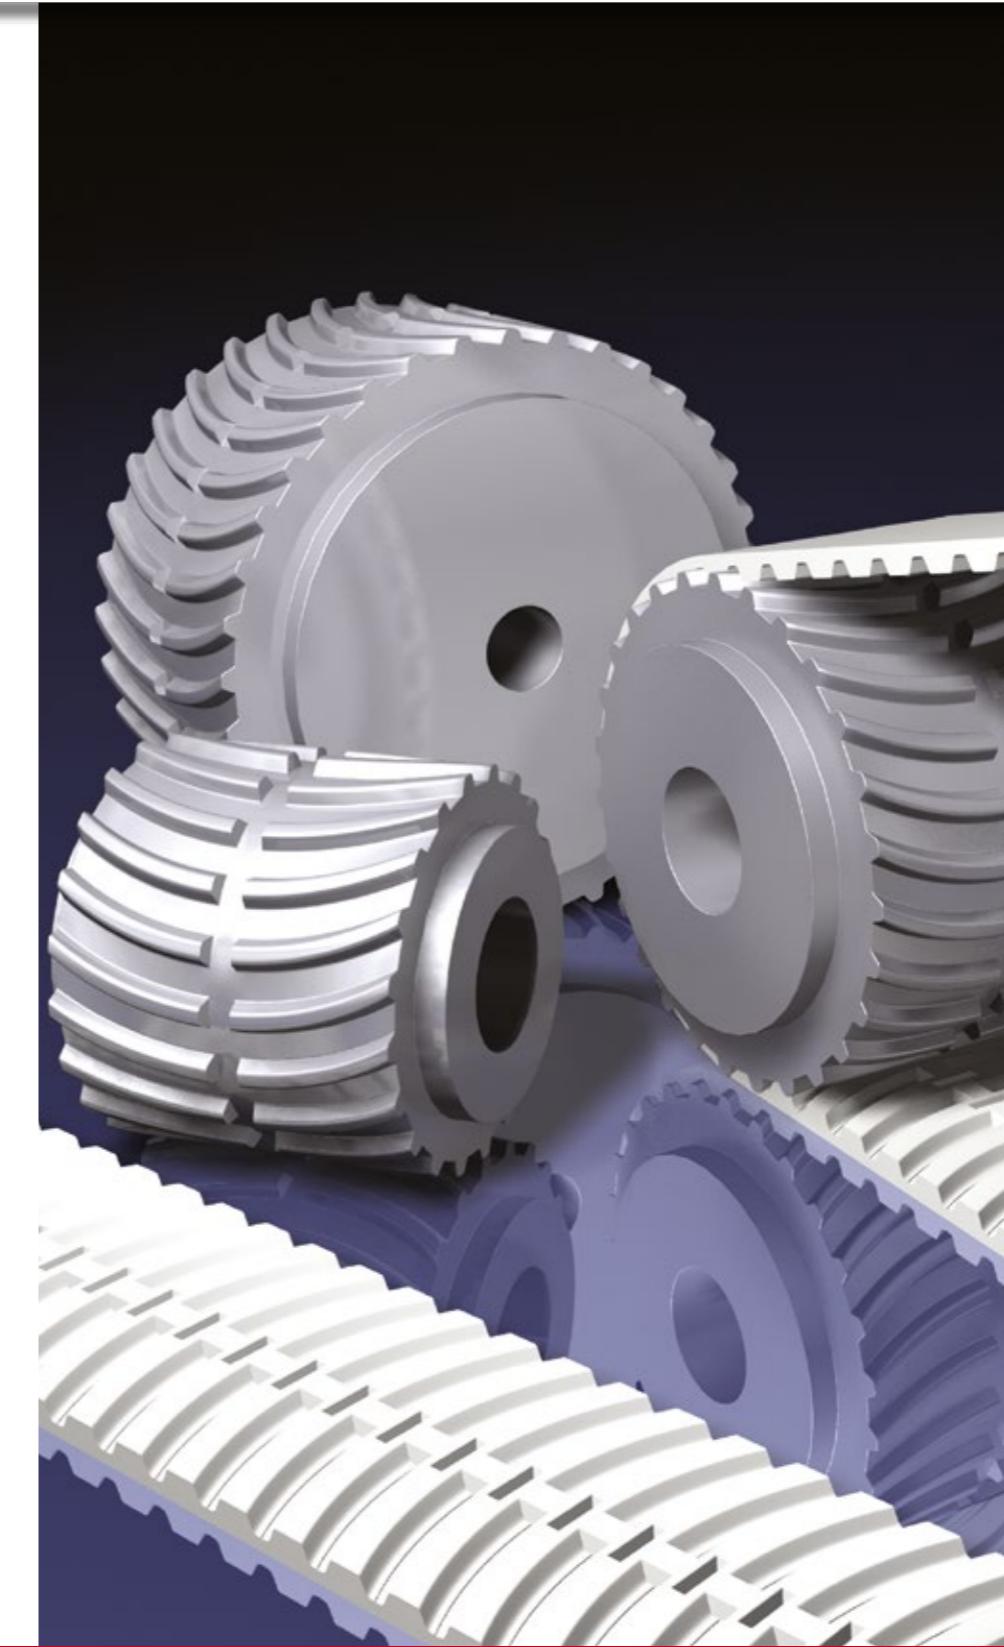

Please clean and lightly oil the contact surfaces of the shaft and hub. Then insert the tensioners into the hub rest and push onto the shaft. Tighten the clamping screws crosswise to the tightening torque  $M_s$  indicated in the table in several stages using a torque wrench.

Please check the tightening torque of all tightening screws in the order they are arranged. The table values of  $M_T$  and  $F_A$  have been calculated for an assembly with oil.

**Important:** Please do not use oil with molybdenum disulphide or high-pressure additives and grease. The coefficient of friction is significantly reduced by this.

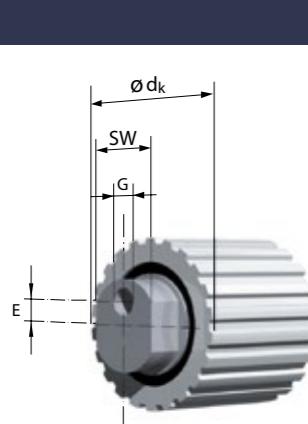

## Synchronising pulleys with tensioners

Keeping things moving!

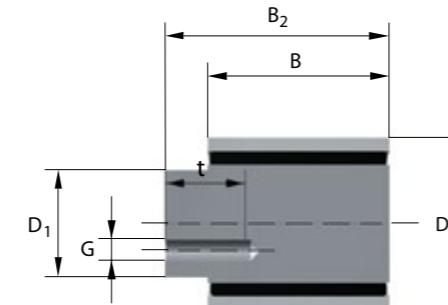

## Tension rollers Type B with excenter, teeth on the running surface

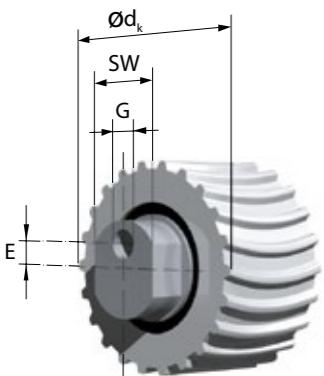

## Tension rollers Type B with excenter, teeth on the running surface

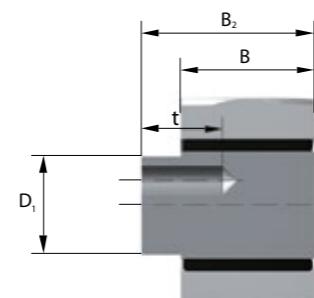

Tension roller (T-, AT profile)

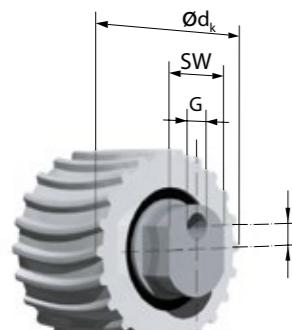

Type B/E0 (toothed)

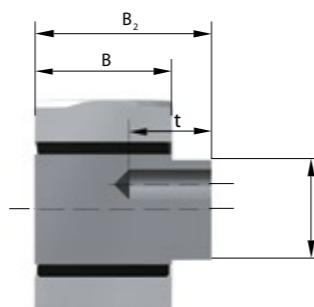

Tension roller (BAT profile)

Type B/E0 left

Tension roller (BAT profile)

Type B/E0 right

Tension rollers B are seated twice on grooved roller bearings. The bearings are greased for live. Permanent temperatures up to 70°C and under will not lead to a reduced useful life of the grease. Short-term temperatures up to 120°C are permitted.

**Materials:**

Axis: steel  
Running roller: aluminium

## Notes on clamp connectors / clamp plate system

The BRECO® fix clamping elements are used in linear systems. Clamp connectors and clamp plates optimally adapted to our timing belts are available for diverse areas of application. Both elements are used to fasten the belt ends on the machine frame or on the moving unit.

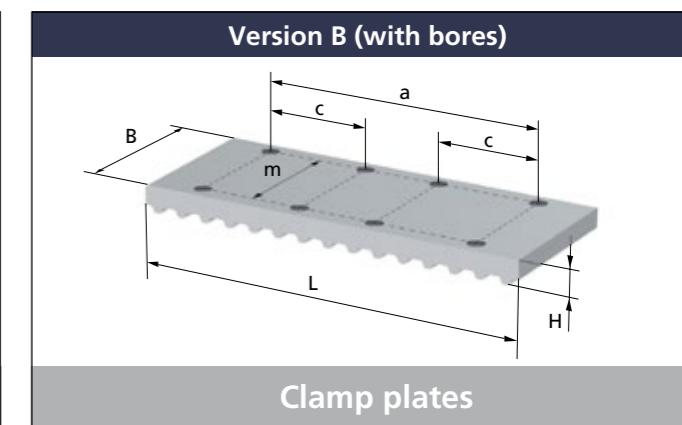

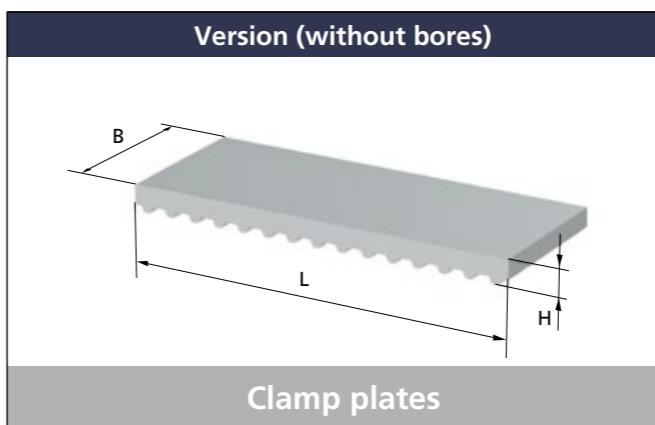

While the clamp connectors only enable simple fastening of the belt ends, the clamp plate can also be used for setting the pretensioning force via a clamping unit.

The different variants A, B and C specially optimised to the load are available to the user within a complete clamp plate system for the individual belt types and belt widths. The corresponding assignment is shown in table in the clamp plates section.

The different variants and subcategories ensure absolute clamping reliability together with optimum handling and assembly thanks to their design. Providing a complete system comprising base plate, if necessary toothed insert, upper plate, clamping unit and standard part accessories spares the user awkward assembly and coordination of the individual parts. In addition, using the toothed inserts made from high-strength polyamide in the clamp plates of variant B allows production costs to be optimised. This results in a system with a very good price-performance ratio overall.

Variant A is divided into types 1,2 and 3. Type 1 is supplied without bores and clamping unit, which means it provides freedom of constructional design, while allowing the belt end to be fastened without additional movements of the „fixed“ clamping position. Type 2, on the other hand, offers the clamping unit and long holes for clamping the timing belt drive. It is then necessary to fasten the clamp plate of type 2 on the machine frame. Type 3 is typically provided for „free suspension“ of the belt tensioning on the clamping unit. A protection that might be necessary against turning and movement must be provided either by fixing the clamping unit itself or corresponding limiting or guide elements in the clamp plate environment.

Variants B and C are generally suitable for both connections to the machine frame, „fixed“ and „freely suspended“, and are available in the version „without clamping unit“.

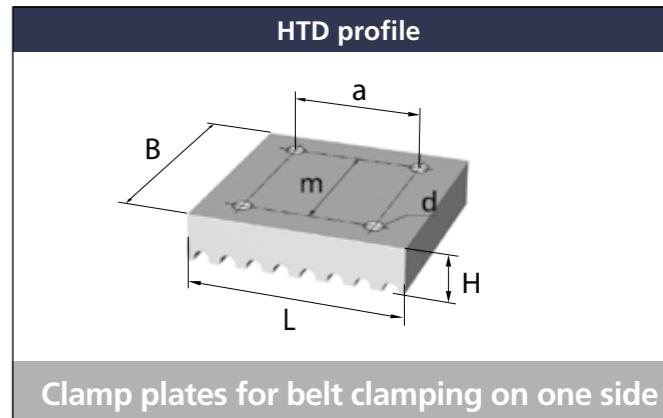

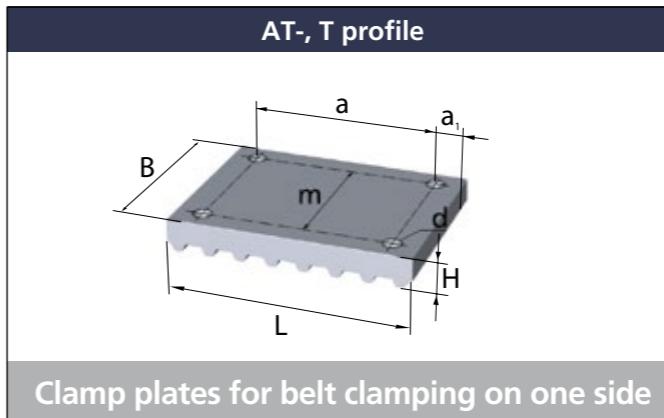

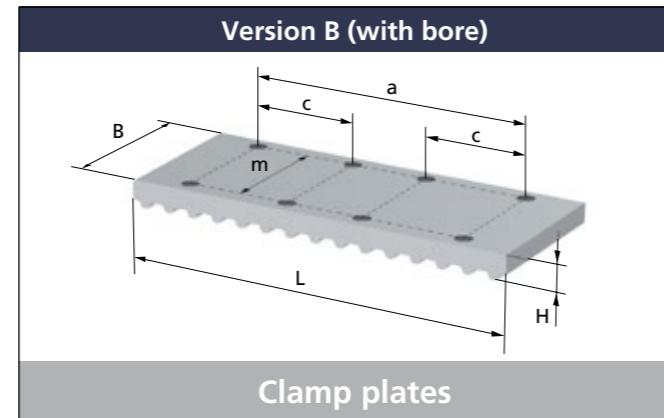

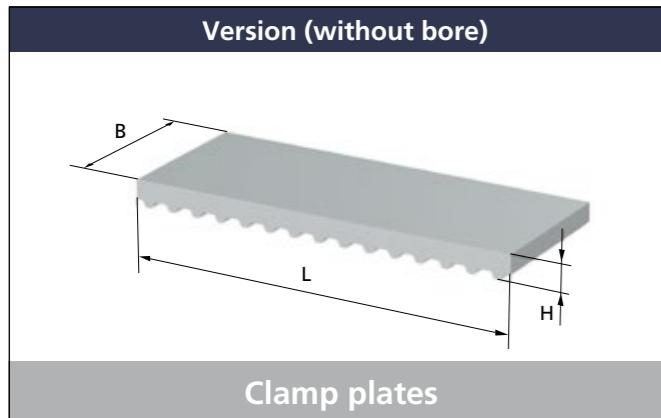

Clamp plates are often used in linear technology, when one or both belt ends need to be affixed to the housing. An adjustment of the pretension is not possible with clamp plates.

**Remark:**  
Variant „B“ and „C“ are also available without tensioning device. If you don't need it, please make a note in the order code.

## Notes on the assembly of BRECO® timing belts in the BRECO® fix clamp plates

The BRECO® fix clamp plates are designed so that clamping reliability and optimum assembly of the timing belt in the clamp plate are ensured. We therefore recommend reading and complying with the assembly notes for the relevant types as well as the following assembly workflow.

**Please proceed in the following steps when assembling timing belts and clamp plates:**

### Step 1: Preparation for assembly

Cut the timing belt in a gap between two belt teeth to the required length and place it in the toothed section of the open clamp plate.

### Step 2: Preassembly of the clamp plate

Place the upper and lower plate as well as the toothed insert, if necessary, and connect everything with the preassembly screws (countersunk screws). Use a suitable torque wrench for this. Please note the tightening torques indicated for the relevant types. The preassembly screws keep the clamp plates securely closed during the subsequent steps.

### Step 3: Tensioning the belt /fastening on the machine frame

Move the clamp plate(s) into the required assembly position in the machine. The clamp plates are usually fastened directly on the machine frame. This fastening is done with fastening screws (cylinder head screws) via the long holes of the clamp plates. We recommend leaving the fastening screws loose until the clamp plate is moved into position by the clamping unit, meaning the necessary pretensioning force is applied to the timing belt. After the pretensioning force has been set in the timing belt, the fastening screws can be tightened according to the specifications.

#### Special feature of freely suspended assembly:

Freely suspended assembly on the clamping unit is possible, but not strictly recommended. Step 2 of these instructions is logically followed by step 4 and then tensioning of the belt (step 3). The fastening screws must also be installed and tightened according to the specifications for freely suspended assembly. To apply the tensioning force during freely suspended assembly, we recommend fixing the clamp plate in a vice or similar. The fixing should be carried out in the front area (near to clamping unit).

### Step 4: Applying the clamping force in the clamp plate

To ensure the required clamping reliability, the belt fastening in the clamp plates must be clamped again in addition to the preassembly and fastening procedure.

This clamping is carried out for belt widths > 50 mm (clamp plate variant B type 2 and variant C) using the countersunk screws and tightening these to the specified tightening torque for the clamping force. The fastening screws must also be tightened to the corresponding torque.

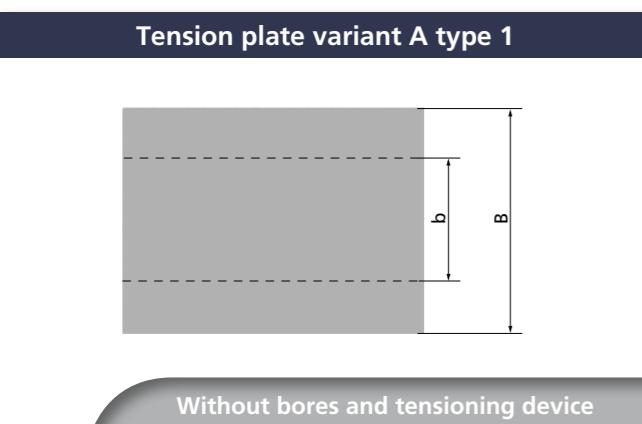

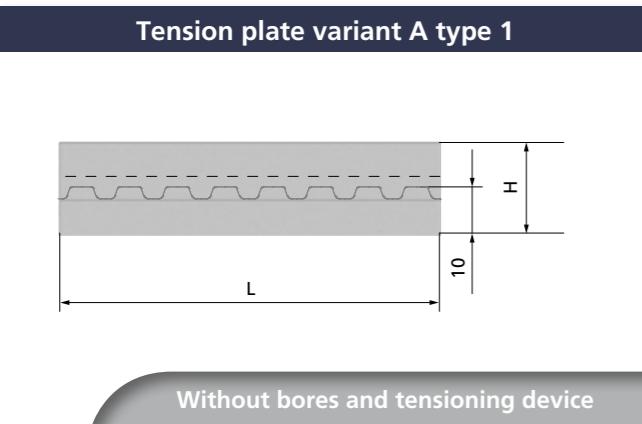

This step does not apply for the clamp plates variant A and variant B type 1, as this tensioning force was already applied here by tightening the fastening screws in the long holes.

### Step 5: Retightening of the belt at a later date

If it is necessary to readjust the pretensioning force in the timing belt at a later date, only the fastening screws have to be loosened and „retightened“ via the clamping unit. The pretensioning of the belt tensioning in the clamp plate itself can be retained for this procedure.

In the case of assembly freely suspended on the threaded rod, there is no need to loosen the fastening screws, as retightening can be done directly.

Available worldwide around the clock.

Quality products, first-class advice and individual service are part of the standard package for all members of Mulco Europe EWIV. This standard is constantly being upgraded and adapted to the needs of the customers.

The „belt pilot“ is an online tool which allows design engineers all over the world to work round the clock on design solutions for timing belt drives. They can carry out geometric calculations to configure the belt drive, decide on the number of teeth, plan the belt width or calculate the pulley diameter, save the configured drive or open calculations already saved, or use the performance calculation to check the possibility of using the selected timing belt with the load data - the „belt pilot“ has the versatility and wide range of calculation options to help them find the right solution quickly.

The CAD download facility enables users to transfer timing belts and components to their own CAD system as CAD drawings. 2D or 3D CAD drawings in a wide and diverse range of file formats are user-definable and can be copied directly into CAD programs.

To find the „belt pilot“ visit [www.mulco.de](http://www.mulco.de).

## Pre-tension

Pre-tension highly influences the operating conduction and life of the whole gearing. It is therefore one of the few figures which the user of tooth-belt drives has to set for himself.

Pre-tension depends on the geometry and the stress of the tooth-belt drive so that the high values of the positioning and repetition precision are attainable, and through that the desirable transmitting behaviour can only be realised under the condition of a certain pre-tension.

## BRECO® Measuring Device TSM alpha 1

The fully electronic measuring instrument enables the controlling of the set-up pre-tension in tooth-belt drives in a very easy and secure way. Special sensors register the vibration of a tooth-belt that has been stimulated in advance. The instrument registers the belt's self-frequency. The light insensitive sensors allow for a relatively high measuring distance between the sensor and the belt. For this reason the instrument is very well adjusted to production and installation/assembly conditions.

Using the basic physical principle of a string vibration, the pre-tension and self-frequency of the belt are connected with each other. It is therefore an easy and fast task to calculate the belt's pre-tension according to the measured frequency.

### The advantages

- easy-handling
- contactless measurement with one-sided belt touch
- measuring on all belt types including all different types of tension members, e.g. steel, Kevlar, glasfiber
- reliable measuring results that are highly reproducible
- connection for external sensor for measuring hard-accessible parts
- an LCD indicating how full the battery is
- optical and acoustical indication of necessity of battery change
- measuring range: 5 to 500 Hz
- maximum measurement tolerance:  $\pm 1$  Hz (more than 100 Hz  $\pm 2$  Hz)
- dimension: 120 mm x 65 mm x 30 mm
- weight: 160 g
- battery-powered
- 3-digital LCD-display
- transport suitcase

Great Britain

BRECO not only believes in a high standard of quality for production, but also when it comes to advice and service concerning all aspects of polyurethane timing belt technology. Our sales partners are all specialists in this field and can offer you the very best customer support.

Drive elements from BRECO – safety in motion.

## Available product catalogues - for every application the right product

### BRECO® and BRECOFLEX® timing belts

- General information (application and calculation notes)
- Endless timing belts (BRECOFLEX®)
- Open length timing belts (BRECO® M)
- Endless joined timing belts (BRECO® V)
- Timing belt lock for AT10, T10

### ATN-System - BRECO® timing belts for transport technology

- General information about the ATN system (application information and notes on calculations)
- ATN timing belts
- ATN timing belt lock
- ATN standard profile connection
- ATN profiles
- ATN components

### BRECO® and BRECOFLEX® flat belts

- General information
- Endless flat belts (BRECOFLEX®)
- Open length timing belts (BRECO® M)
- Open length flat belts (BRECO® M)
- Endless joined flat belts (BRECO® V)
- Fastening elements

### Finishing of timing belts

- Coatings for polyurethane timing belts
- Mechanical rework of coatings
- Mechanical rework of timing belts
- High strength profile connection
- Welded-on profiles

### Components

- General information
- Timing pulleys
- Synchronising shafts
- Synchronising pulleys with tensioners
- Tension rollers
- BRECO® fix-clamping elements

### BRECObasic®-timing belts

- Product range
- Coatings for BRECObasic® timing belts

### BRECOprotect®-timing belts

- Product range

### Further information about:

- Sales partners
- New products and developments
- Available catalogues can be found at [www.breco.de](http://www.breco.de)

### Warranty

All information has been compiled with the utmost care and attention and reflects the current state of knowledge. However, we would like to particularly draw your attention to the fact that all technical data is quoted subject to tolerances and must not be interpreted as a guaranteed delivery specification. We reserve the right to make technical changes as part of our continuous product development process.

# Keeping things moving!

This company positioning confronts  
BRECO GmbH & Co. Zahnscheiben KG as manufacturer  
of BRECO® Components with new great challenges,  
which are accepted with pleasure.
