

CVM-B100

CVM-B150

Power analyzer for panels

Description

- High-end power analyzers, versatile and expandable, with 4-quadrant measurement (Consumption and Generation). Suitable for high and low Voltage installations, since it can process high voltage and current transformation ratios and is self-scaling.

Features

- Format: 96x96 (CVM B100) and 144x144 (CVM B150)
- High resolution and colour screen
- IP65 front panel protection
- 5 Voltage inputs (3 phases + Neutral + Earth)
- 4 Current inputs, ITF
- Voltage, Current and Power Accuracy = 0.2
- Energy Accuracy = 0.5S
- Expandable up to 4 modules digital/analogue inputs/outputs modbus/TCPmodbus/XML comm
- 3 capacitive keys (tactile)
- Universal power supply
- Modbus/RTU Bacnet communicate integrated
- Allows customizable views

Other features

- Innovative SCV interface (Slide, Choose & View) for a versatile display of data; the parameters displayed on the screen can be customised
- Electrical parameters: instantaneous, maximum, minimum and demand
- Incremental electrical parameters (energy), hours, costs, emissions
- 3 Tariffs (can be selected via the digital input or RS485 communications)
- Capable of showing costs and KgCO₂ emission sources on the screen, depending on the energy consumed or generated
- 2 Relay outputs for alarms with delay, times, ON and OFF, etc.
- 2 Transistor outputs for alarms or impulse generation, with all possible configuration parameters
- 2 digital inputs, with optimal control over the selection of the unit's tariffs or configurable for monitoring purposes, with RS-485 Modbus communications, monitoring or logical states of other electromechanical units. (RCCBs with self-reclosing systems, thermal-magnetic circuit breaker, etc.)

Power analyzer for panel

Applications

- Application for the control and monitoring of all parameters measured by analyzers with communications systems, covering a comprehensive list of parameters in Low and High voltage installations.
- 4 alarms (2 transistor and 2 relay controlled alarms), fully and independently programmable, in accordance with a low or high value, hysteresis, connection/disconnection delays, normally open or closed standby status and latch.
- Generation of impulses with transistor outputs, fully and independently configurable over any incremental parameter (energy, costs, kgCO₂, total meter or tariff hours)
- Transducer that converts analogue signals to any instantaneous parameter that the unit can measure or calculate, with expansion modules with analogue outputs.
- Display of process signals, with a expansion module with analogue inputs; optional reporting of these signals to SCADA systems through other communications systems
- Control of electrical load operations or alarm signals by means of programming the built-in transistor or relay outputs or other outputs added with expansion modules.
- Autonomous datalogger with WEB server, connected to an EDS unit. Direct monitoring of the historical data stored in the unit with a conventional WEB browser.

Características técnicas

Power circuit	100...230 V _{ac} +/-15% / 100...260 V _{dc} +/-15%
AC Frequency	45...65 Hz
AC Consumption	min. 4 VA / max. VA (25 VA with all expansion options)
DC Consumption	min. 4 VA / max. VA (25 W with all expansion options)
Voltage measurement circuit	Rated voltage 12.7 V...400/600 V p-n / p-p Frequency 40 / 70 Hz (360...440 Hz) Measurement margin 2,54 %...120% of the Un for Un=500Vac (p-n) Admissible overvoltage 750 Vac Maximum consumption (limited current) < 0,1 VA
Current measurement circuit	Current measurement channels 4 (3 phases + Neutral) Input current .../5A or .../1A .../250mA (MC-ITF) Minimum current for class 250 mA Start-up current 10 mA Measurement margin 0,010...8,48A Allowable overload 10A permanent, 100 A t<1s Consumption < 0,15 VA
Maximum transformation ratios	Primary V : 6,000,000 (phase-neutral) Primary A : 50,000 Product of Primary V x Primary A < 300,000,000,000
Maximum meter value (total)	Yes (Primary A / Secondary A) < 1000 → 2 GW Yes (Primary A / Secondary A) ≥ 1000 → 2 TW
Accuracy class	Voltage 0,2% Current 0,2% Neutral current 0,5% Power 0,5% ± 1 digit Active energy class 0,5 S Reactive energy class 0,2
Display of harmonics	Voltage/ Current 50 th

Technical features

Connections		
Digital inputs	3 (selection of tariffs, states or external alarms)	
Type	Opto-isolated potential-free contact	
Activation current	4 mA (12V maximum voltage of open contacts)	
Insulation	4 kW	
Digital outputs	Generation of impulses or Alarms	
Type	2 NPN transistors	
Digital outputs to relay	2	
Maximum voltage of operation	+/- 400 Vac	
Maximum operation current	+/- 130 mA	
Maximum frequency	1000 impulses / second	
Pulse duration (T on / T off)	0.3 / 0.7 ms (1 ms of a complete impulse)	
Alarms		
Type	2 relays	
Maximum power of operation	1500 VA / 180 W	
Maximum voltage of operation	400 V	
Maximum switching current	6A	
Electrical working life (400V / 6A)	3×10^4 (85 °C)	
Mechanical working life	1×10^7	
Integrated communications	RS-485 Modbus or Bacnet RTU A(+) and B(-)	
Speed	9600...115200	
bits, parity, stop	8, n, 1	
Environmental conditions		
Operating temperature	-10...+50°C	
Relative humidity	5...95%	
Altitude	2000 m	
Build features		
Shape	Assembly on 96x96mm or 144x144 panel	
Depth	110mm w/o expansion modules (both models)	
Front panel IP Protection	IP65	
Rear panel IP Protection	IP20	
Universal power supply	Power circuit: 100 to 230 Vac +/- 15% / 100...260 Vdc +/-15% Power supply frequency: 45...65 Hz	
Safety	Designed for CAT III 300/520 Vac installations, in accordance with EN 61010 Double-insulated electric shock protection, class II	
Standards	IEC 62053-22, ANSI (class 0.5S), IEC 62053-23 ANSI C12.1 (class 2), IEC 61010, IEC 61000, UNE-EN 55022. Measurement in accordance with MID, design in accordance with UL IEC 61000-4-2, IEC 61000-4-3, IEC 61000-4-11, IEC 61000-4-4, IEC 61000-4-5

CVM-B150

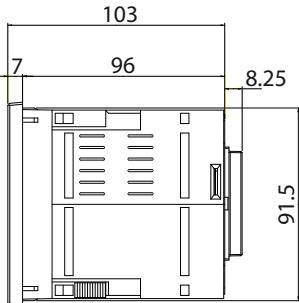

Power analyzer for panel

Connections

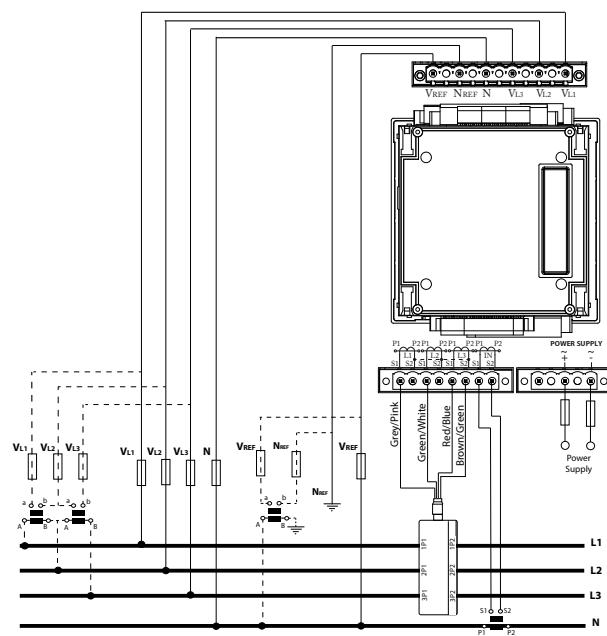

Three-phase measurement, with or without voltage transformer and current transformers

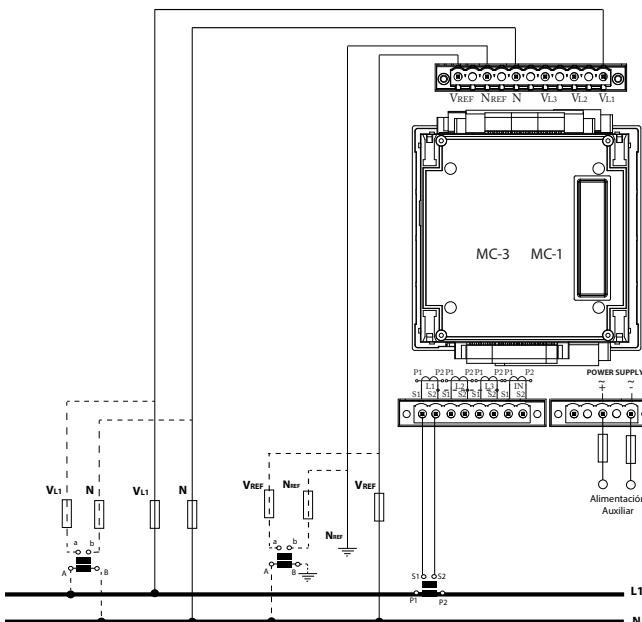

Direct phase-phase measurement with current transformers

Three-phase measurement, with or without voltage transformer and MC-3 type transformers (1250 mA) + MC-1 for neutral current

Measurement in single-phase system with or without voltage transformer

Note: for other options consult the product manual
