

YKL 2000

-
- A diagram of a mechanical system. A hand is shown pressing a button labeled "Re Set". The system consists of a central triangular component labeled "T" (Throttle) connected to a horizontal bar. The bar is supported by two circular components (pulleys or rollers) and is connected to a "Load" block on the right. A "Supply" line enters from the left, passes through a circular component, and connects to the bar. A feedback line connects the "Load" block back to the "Re Set" button.

VK 4000 Series Rod Thermostats

The VK 4000 series of rod thermostats is suitable for loads up to 20A. The product is designed with heavy duty contacts and a robust switching mechanism to provide excellent reliability and long life.

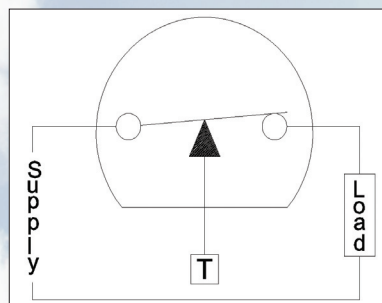

VK 4000

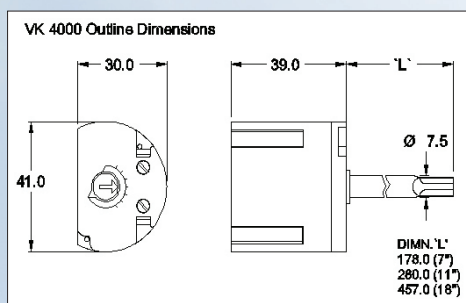

Technical Specification	
Contacts	Single pole
Function	Break on temperature rise
Voltage	230V ac $\pm 10\%$
Current	20A*

* not recommended for currents below 0.5A ac.

- **20A rating** – suits most domestic applications
- **Simple 2-wire connection** – easy to install
- **Manual reset options** – resets only by a positive action
- **3-standards lengths** – suits most domestic cylinders
